NATO LETTER OF PROMULGATION

The enclosed Allied Data Publication ADatP-34, Edition N, Version 2 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition N, Version 2 is effective on receipt and supersedes ADatP-34, Edition N, Version 1 which shall be destroyed in accordance with the local procedure for the destruction of documents.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Dimitrios SIGOULAKIS
Lieutenant General, GRC (A)
Director, NATO Standardization Office

CHAPTER 1. INTRODUCTION

001. Volume 2 of the NISP focuses on agreed interoperability standards and profiles.

002. The NISP references Standards from different standardization bodies¹. In the case of a ratified STANAG, NATO Standardization procedures apply. The NISP only references these STANAG's without displaying the country-specific reservations. The country-specific reservations can be found in the NATO Standardization Office's NATO Standardization Document Database (NSDD).

003. The Combined Communications Electronics Board (CCEB) nations will use NISP Volume 2 Chapter 3 and Section 3.3 tables to publish the interoperability standards for the CCEB under the provisions of the NATO-CCEB List of Understandings (LoU)².

1.1. SCOPE

004. The scope of this volume includes:

- Identifying the standards and technologies that are relevant to a service oriented environment,
- Describing the standards and technologies to support federation.

¹In case of conflict between any recommended non-NATO standard and relevant NATO standard, the definition of the latter prevails.

CHAPTER 2. REFERENCE MODELS: TRANSITION FROM PLATFORM CENTRIC TO SERVICE ORIENTED MODELS

005. Information technology has undergone a fundamental shift from platform-oriented computing to service-oriented computing. Platform-oriented computing emerged with the widespread proliferation of personal computers and the global business environment. These factors and related technologies have created the conditions for the emergence of network-oriented computing. This shift from platform to network is what enables the more flexible and more dynamic network-oriented operation. The shift from viewing NATO and partner Nations as independent to viewing them as part of a continuously adapting network ecosystem fosters a rich information sharing environment.

006. This shift is most obvious in the explosive growth of the Internet, intranets, and extranets. Internet users no doubt will recognize transmission control protocol/internet protocol (TCP/IP), hypertext transfer protocol (HTTP), hypertext markup language (HTML), Web browsers, search engines, and Java¹ Computing. These technologies, combined with high-volume, high-speed data access (enabled by the low-cost laser) and technologies for high-speed data networking (switches and routers) have led to the emergence of network-oriented computing. Information “content” now can be created, distributed, and easily exploited across the extremely heterogeneous global computing environment. The “power” or “payoff” of network-oriented computing comes from information-intensive interactions between very large numbers of heterogeneous computational nodes in the network, where the network becomes the dynamic information grid established by interconnecting participants in a collaborative, coalition environment. At the structural level, network-enabled warfare requires an operational architecture to enable common processes to be shared.

007. One of the major drivers for supporting net-enabled operations is Service-Oriented Architectures (SOA). SOA is an architectural style that leverages heterogeneity, focuses on interfaces between services and as such this approach is inherently platform-neutral. It is focused on the composition of Services into flexible processes and is more concerned with the Service interface and above (including composition metadata, security policy, and dynamic binding information), more so than what sits beneath the abstraction of the Service interface. SOA requires a different kind of platform, because runtime execution has different meanings within SOA. SOA enables users and process architects to compose Services into processes, and then manage and evolve those processes, in a declarative fashion. Runtime execution of such processes is therefore a metadata-centric operation of a different kind of platform -- a Service-oriented composite application platform.

008. Service-enabled operations are characterized by new concepts of speed of command and self-synchronization.

¹Registered Trademark of ORACLE and/or its affiliates. Other names may be the trademarks of their respective owners.

009. The most important SOA within an enterprise is the one that links all its systems. Existing platforms can be wrapped or extended in order to participate in a wider SOA environment. NATO use of the NISP will provide a template for new systems development, as well as assist in defining the path for existing systems to migrate towards net-enabled operations.

CHAPTER 3. STANDARDS

3.1. INTRODUCTION

010. The purpose of this chapter is to specify the agreed NISP standards. The document organizes these standards, following baseline 5.0 of NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-D(2021)0021 on "C3 Taxonomy Baseline 5.0" dated 23 September 2021. A graphical representation of this taxonomy is included in volume 1.

011. For some standards it was not clear yet which service identified in the C3 Taxonomy should be used. Therefore, as an interim solution, the taxonomy was extended with e.g. user-defined "Cloud Services". In a separate section, all standards are listed for which could not yet be defined how they should be linked to the C3 Taxonomy.

012. The standards are presented in tabular form. Each table represent a subtree from the C3 taxonomy and each table line (marked in bold and spanning all columns in the table) represents a taxonomy node from the subtree. Under each taxonomy node title, all standards which are mapped to the node are listed with the following attributes: title of the standard; where possible, a link to the standard; publication number of the standard¹; a list of all the capability profiles where the standard is used; and finally the "responsible party" which is the domain expert that advises NATO about the standard. In general, a taxonomy node is only listed if at least one standard is assigned to this taxonomy node.

013. When STANAG X Ed Y is in ratification process, this is indicated by STANAG (RD) X Ed Y, and when it is a study draft, this is indicated by STANAG (Study) X Ed Y.

3.1.1. Releasability Statement

014. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

3.2. USER APPLICATIONS

¹TMF000 is included in FMN Spiral 3. An official publication number is not yet available.

3.3. TECHNICAL SERVICES

015. The “Technical Services” include those services required to enable “User Applications”. They are part of the “Back-End Capabilities” while “User Applications” are part of “User-Facing Capabilities”.

016. According to the C3 Taxonomy, they consist of “Community Of Interest (COI) Services”, “Core Services” and “Communications Services”. The complete collection of Technical Services is sometimes referred to as the “Technical Services Framework” (TSF) or “NNEC Services Framework” (NSF).

017. In addition to the “Technical Services” identified in the C3 Taxonomy, a taxonomy layer “Cloud Computing” has been added. This enables a more useful categorization of cloud-based standards (currently only included as candidate standards).

CHAPTER 4. AGREED PROFILES

4.1. INTRODUCTION

018. The NATO Interoperability Standards and Profiles include the set of Agreed Profiles listed below.

Table 4.1. Agreed Profiles

| Service Area | Title |
|--|---|
| Abstract | |
| URI | ID |
| Federated Mission Networking | FMN Spiral 3 Profile |
| This document defines the Standards Profile for Federated Mission Networking (FMN) Spiral 3. The FMN Standards Profiles provides a suite of interoperability standards and other standardized profiles for interoperability of selected community of interest services, core services and communications services in a federation of mission networks. It places the required interoperability requirements, standards and specifications in context for FMN Affiliates. | |
| FMN Spiral 3 Profile | FMN3 |
| Federated Mission Networking | FMN Spiral 4 Profile |
| Federated Mission Networking is founded on a service-oriented approach. The interoperability standards applicable to these services are identified and specified in line with the C3 Taxonomy. Similarly, the breakdown of the standards profiles more or less follows the taxonomy. | |
| FMN Spiral 4 Overview of Standards and Profiles | FMN4 |
| Architecture | Profile for the Architecture development |
| This profile lists recommended standards for miscellaneous architecture related subjects. | |
| architecture-profile.pdf | ARCHITECTURE |
| Archive | Profile for the Long Term Preservation of NATO Digital Information of Permanent value |
| Outlines the file formats and package structures approved by the Archives Committee for the long-term preservation of NATO digital information of permanent value. | |
| NISP-V2-archive-profile.pdf | ARCHIVE-ARCHIVE |
| Security Services | Service Interface Profile Security Services |

| Service Area | Title |
|--|---|
| Abstract | |
| URI | ID |
| This Service Interface Profile (SIP) describes the key elements that make up the NNEC Core Enterprise Services (CES) Security Services. | |
| AI_TECH_2016.06.02.01_SIP.pdf | SIP-SEC |
| REST Security Services | Service Interface Profile For REST Security Services |
| This specification provides the profile for securing representational state transfer (REST) web services (known as RESTful web services) that are deployed within the NNEC web service infrastructure. It specifies security requirements that need to be accounted for depending on the environment in which the services are being deployed, and the level of assurance required for protecting those services. This profile covers the required security protection profile for a Client to access protected resources on a Resource Server using REST. | |
| AI_TECH_2016.06.02.02_SIP.pdf | SIP-REST |
| Security Token Services | Service Interface Profile For Security Token Services |
| The purpose of this Service Interface Profile (SIP) is to specify how the security token service component of the Core Enterprise Services (CES) Security Services may be called. | |
| AI_TECH_2016.06.02.03_SIP.pdf | SIP-TOKEN |
| Policy Enforcement Points | Service Interface Profile For Policy Enforcement Points |
| The purpose of this Service Interface Profile (SIP), which should be read along with the Agency Directive 06.05.04.02.H 2, "Service Interface Profile for Security Services" [NCIA AD 06.05.04.02.H], is to specify how services may be called that are protected by the Core Enterprise Services (CES) Security Services. | |
| AI_TECH_2016.06.02.04_SIP.pdf | SIP-POLICY-ENFORCE |
| Enterprise Directory Services | Service Interface Profile For Enterprise Directory Services |
| The purpose of this Service Interface Profile (SIP) is to specify the interface of the directory service itself. | |
| AI_TECH_2016.06.02.05_SIP.pdf | SIP-ENTR-DIR |
| Messaging | Service Interface Profile For Messaging |
| This specification provides the interface control for simple object access protocol (SOAP) web services that are deployed within the NNEC web service infrastructure. | |
| AI_TECH_2016.06.02.06_SIP.pdf | SIP-MESG |

| Service Area | Title |
|--|---|
| Abstract | |
| URI | ID |
| REST Messaging | Service Interface Profile For REST Messaging |
| This specification provides the profile for securing representational state transfer (REST) web services (known as RESTful web services) that are deployed within the NNEC web service infrastructure. This covers only the call from a Web Service Consumer to a Web Service Provider using REST, and the response from the service provider. It includes how the message must be structured and the elements that must be contained within the call. | |
| AI_TECH_2016.06.02.07_SIP.pdf | SIP-REST-MSG |
| Publish-Subscribe Services | Service Interface Profile For Publish-Subscribe Services |
| This document gives directives along with clarifications and amendments to the [OASIS WS-BaseNotification, 2006] and [OASIS WS-BrokeredNotification, 2006] specification on how to implement a notification broker/subscription manager to promote interoperability between the publish/subscribe engines and generic message subscribers. Some extensions to the protocol have been introduced in order to meet NATO requirements. | |
| AI_TECH_2016.06.02.08_SIP.pdf | SIP-PUBSUB |
| Publish-Subscribe Notification Broker With Subscription Manager | Service Interface Profile For Publish-Subscribe Notification Broker With Subscription Manager |
| This document is part of a Service Interface Profile (SIP) for Publish/Subscribe Core Enterprise Services (CES) and should be read together with the main document [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification compliant notification broker. It is REQUIRED that each notification broker implementation also includes the subscription manager functionality. | |
| AI_TECH_2016.06.02.09_SIP.pdf | SIP-PUBSUB-NOTIF-BROOKER |
| Publish-Subscribe Notification Consumer | Service Interface Profile For Publish-Subscribe Notification Consumer |
| This document is part of a Service Interface Profile (SIP) for publish/subscribe Core Enterprise Services (CES) and should be read together with the main document "Service Interface Profile for Publish/Subscribe Services" [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification-compliant notification consumer. | |
| AI_TECH_2016.06.02.10_SIP.pdf | SIP-PUBSUB-NOTIF-CONSUMER |
| A Notification Cache Service | Service Interface Profile For A Notification Cache Service |

| Service Area | Title |
|---|--|
| Abstract | |
| URI | ID |
| This Service Interface Profile (SIP) describes the key elements that make up the NNEC Core Enterprise Services (CES) Notification Cache service. It describes and profiles the operations which a Notification Cache service offers together with the associated message formats, and serves as a template and guideline for implementations. | |
| AI_TECH_2016.06.02.11_SIP.pdf | SIP-NOTIF-CACHE |
| Basic Collaboration Services | Service Interface Profile For Basic Collaboration Services |
| This Collaboration Service Interface Profile (SIP) is focused on instant messaging and is based on the extensible messaging and presence protocol (XMPP). | |
| AI_TECH_2016.06.02.12_SIP.pdf | SIP-BCS |
| Core And Advanced Instant Messaging Collaboration Services | Service Interface Profile For Core And Advanced Instant Messaging Collaboration Services |
| This document specifies the Service Interface Profile (SIP) for a number of instant messaging services that can be implemented and used by any XMPP entity (XMPP Client or XMPP Server) on the XMPP network. | |
| AI_TECH_2016.06.02.13_SIP.pdf | SIP-MESG-COL-SERV |
| Geospatial Services – Geoprocessing Service | Service Interface Profile For Geospatial Services – Geoprocessing Service |
| This document gives guidance on the implementation of a Geoprocessing Service, being a special kind of a Geospatial Service. | |
| AI_TECH.06.02.15_SIP.pdf | SIP-GEO-MRS |
| Geospatial Services – Map Rendering Service | Service Interface Profile For Geospatial Services – Map Rendering Service |
| This document gives guidance on the implementation of a Map Rendering Service, being a special kind of a Geospatial Service. | |
| AI_TECH_2016.06.02.14_SIP.pdf | SIP-GEO-MRS |
| Recognized Air Picture Data Services | Service Interface Profile for Recognized Air Picture Data |
| This Service Interface Profile provides detailed information, guidance, instructions, standards and criteria to define the minimum set of data elements that are required to be available for operational or technical reasons so that correctly formatted technical message can be generated to establish a Recognized Air Picture in a federated environment. | |

| Service Area | Title |
|---|--|
| Abstract | |
| URI | ID |
| FMN Spiral 3 Profile including SIP for RAPD | SIP-RECOGNIZED-AIR-PICTURE-DATA |
| Service Management Services | Service Interface Profile for Service Management and Control |
| This Service Interface Profile provides guidance and technical details to the procedures, supporting services, infrastructure and data attributes required to implement Service Management and Control (SMC) services in Mission Networks. As such, this document contributes to the establishment of capabilities in support of Federated Mission Networking (FMN) as an affordable, effective and efficient means to enable sharing of information in a coalition environment. | |
| FMN Spiral 3 Profile including SIP for SMC | SIP-FOR-SMC |
| Transport Layer Security | Service Interface Profile for Transport Layer Security |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used as a for the usage of Transport Layer Security (TLS) protocol to provide authentication, confidentiality and integrity services for protecting the communication between a consumer and a provider. This publication is a living document and will be periodically reviewed and updated to reflect technology developments, emerging best practices, evolving standards and new or deprecated cryptographic schemes and algorithms. | |
| FMN Spiral 3 Profile including SIP for TLS | SIP-FOR-TLS |
| Web Applications | Service Interface Profile for Web Applications |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used for development, delivery and consumption of Web applications and dynamic Web sites. This publication is a living document and will be periodically reviewed and updated to reflect technology developments and emerging best practices. | |
| FMN Spiral 3 Profile including SIP for Web Apps | SIP-FOR-WEB-APPS |
| Cryptographic Services | Cryptographic Artefact Binding Profiles |
| Profile the use of cryptographic protocols, which can be used to implement support for different cryptographic techniques and mechanisms, for generating cryptographic artefacts to be stored in a cryptographic binding. | |

| Service Area | Title |
|--|---|
| Abstract | |
| URI | ID |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 2 | BINDING-CRYPTO-V2 |
| Informal Messaging Services | Simple Mail Transfer Protocol (SMTP) Binding Profile |
| This profile specifies the mechanism for binding metadata to Internet Email (both formal and informal) including MIME entities. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 2 | BINDING-SMTP-V2 |
| XMPP Services | Extensible Message and Presence Protocol (XMPP) Binding Profile |
| Confidentiality metadata labels can be supported in XMPP stanzas as indicated by XEP-0258 whereby a mechanism for carrying Enhanced Security Services (ESS) Security labels is standardized. This profile extends the XEP-0258 specification to support carrying an Embedded or Detached BDO for Message stanzas. This profile supports the XMPP use cases for one-to-one instant messaging and multi-user chat. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 4 | BINDING-XMPP-V2 |
| Metadata Services | Office Open XML (OOXML) Formats Binding Profile |
| This profile for the OOXML describes how metadata can be maintained. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 5 | BINDING-OOXML-V2 |
| SOAP Services | Simple Object Access Protocol (SOAP) Profile |
| This profilesupports for both SOAP 1.1 and SOAP 1.2. To support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the SOAP protocol layer. Metadata may be bound to the whole data object (SOAP message) or may be bound to subsets of the SOAP message (data object(s) in the SOAP body). In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). | |

| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 6 | BINDING-SOAP |
| REST Services | Representational State Transfer (REST) Profile |
| In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). As such, there is no requirement for metadata binding that is specific for REST. However, to support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the HTTP protocol layer. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 7 | BINDING-REST-V2 |
| Generic Packaging Services | Generic Open Packaging Convention (OPC) Binding Profile |
| This profile defines a generic packaging mechanism, based upon the Open Packaging Container (OPC) defined in ISO/IEC 29500-2:2008, to associate any arbitrary file that do not use the Office Open XML (OOXML) format or have no specific profile for supporting the Binding Information with their own file format. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 8 | BINDING-GENERIC-V2 |
| Sidecar Services | Sidecar Files Binding Profile |
| Sidecar files allow the association of metadata with a data object for which there is no profile. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 9 | BINDING-SIDECAR-V2 |
| XMP Services | Extensible Metadata Platform (XMP) Binding Profile |
| This Binding Profile for XMP describes how metadata should be incorporated within an XMP packet as a structured value. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 10 | BINDING-EXTENSIBLE-V2 |

| Service Area | Title |
|--|--|
| Abstract | |
| URI | ID |
| WSMP Services | Web Service Messaging Profile (WSMP) Profile |
| The Web Service Messaging Profile (WSMP) defines a set of service profiles to exchange arbitrary XML-based messages. WSMP is extensible and may be used by any Community of Interest (COI). This profile supports the requirement to explicitly bind metadata to data (or subsets thereof) whereby the data is XML-based and exchanged between service consumers and service providers using the WSMP message wrapper mechanism. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 11 | BINDING-WSMP |
| XML Artifacts Profile | Common XML artefacts 2.0 |
| This profile supports the requirement to bind metadata to data (or subsets thereof) whereby the data is XML-encoded in one of the following schemas: XML Schema, ISO Schematron, XML Stylesheet, Generic Codelist, Context/Value Association or Security Policy Information File. | |
| ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 12 | BINDING-COMMON-XML |
