## **NATO LETTER OF PROMULGATION**

The enclosed Allied Data Publication ADatP-34, Edition N, Version 2 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition N, Version 2 is effective on receipt and supersedes ADatP-34, Edition N, Version 1 which shall be destroyed in accordance with the local procedure for the destruction of documents.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Dimitrios SIGOULAKIS  
Lieutenant General, GRC (A)  
Director, NATO Standardization Office

## CHAPTER 1. INTRODUCTION

001. The NATO Interoperability Standards and Profiles (NISP) is developed by the NATO Consultation, Command and Control (C3) Board Interoperability Profiles Capability Team (IP CaT).

002. The NISP will be made available to the general public as ADatP-34(N)(2) when approved by the C3 Board.

003. The included interoperability standards and profiles (Volume 2) are **mandatory** for use in NATO common funded Communications and Information Systems (CIS). Volume 3 contains **candidate** standards and profiles.

004. In case of conflict between any adopted non-NATO<sup>1</sup> standard and relevant NATO standard, the definition of the latter prevails.

005. In the NISP the keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" are to be interpreted as described in [IETF RFC 2119].

## 1.1. PURPOSE OF THE NISP

006. NISP gives guidelines to capability planners, programme managers and test managers for NATO common funded systems in the short or mid-term timeframes.

007. The NISP prescribes the necessary technical standards and profiles to achieve interoperability of Communications and Information Systems in support of NATO's missions and operations. In accordance with the Alliance C3 Strategy (ref. C-M(2018)0037) all NATO Enterprise (ref. C-M(2014)0061) entities shall adhere to the NISP mandatory standards and profiles in volume 2.

## 1.2. INTENDED AUDIENCE

008. The intended audience of the NISP are all stakeholders in the NATO Enterprise, and Allied and Partner nations involved in development, implementation, lifecycle management, and transformation to a federated environment.

009. There are specific viewpoints that are mapped to the NISP structure. NISP gives guidelines to:

- capability planners involved in NDPP and NATO led initiatives
- programme managers for building NATO common funded systems
- test managers for their respective test events (such as CWIX, CIAV, etc.)
- national planning and programme managers for their national initiatives

010. Specific NATO or national views to the NISP based on data export to external planning and management systems will be possible upon delivery of an updated version of the NISP Exchange Specification.

This page is intentionally left blank

## CHAPTER 2. BASIC CONCEPTS

011. This chapter gives an overview to understand the data in volume 2 and volume 3. NISP does not differentiate between the usage of NATO and non- NATO standards but always strives to select the most appropriate and up to date. The classification (Mandatory or Candidate) of any standard depends on its location in the NISP, Volume 2 or Volume 3, respectively.

### 2.1. STANDARDS

012. The NISP is composed of non-NATO and NATO Standards. While the first ones are adopted by NATO through the NISP. The second ones are to be considered as normative references.

013. Standards (NATO and non-NATO) are defined and managed in their life cycle by the developing standardization bodies with their own timetable. NATO standards are identified in the NISP by their covering document (STANAG number). They can be in the life cycle status of study/in ratification (no yet NATO approved/expected), promulgated (valid) and superseded/obsolete. A non-NATO standard may have different life cycle status such as emerging, mature, fading, or obsolete. Different standardization bodies may use their own lifecycle status definitions. NISP takes lifecycle status of standards into account, but does not copy them into the NISP database. To inquire about the current status of NATO standards, please visit the NATO Standardization Document Database (NSDD) hosted on the NATO Standardization Organization (NSO) Website. Superseded/obsolete NATO and non-NATO standards may be included in the NISP for maintenance purpose.

014. NISP allow references to either a NATO Standard or the covering document if it exists. However, it is recommended that NATO organizations and nations reference a NATO Standard and NOT the covering document for inclusion in the NISP. IP CaT will subsequently add the covering document as well, but only for reference purposes.

### 2.2. INTEROPERABILITY PROFILES

015. Profiles define the specific use of standards at a service interoperability point (SIOP) in a given context. A SIOP is a reference point within an architecture where one or more service interfaces are physically or logically instantiated to allow systems delivering the same service using different protocols to interoperate. A SIOP serves as the focal point for service interoperability between interconnected systems, and may be logically located at any level within the components, and its detailed technical specification is contained within a service interface profile (SIP). Profiles support prerequisites for programmes or projects and enable interoperability implementation and testing.

016. Interoperability Profiles provide combinations of standards and (sub)profiles for different CIS and identify essential profile elements including:

- Capability Requirements and other NAF architectural views

- Characteristic protocols
- Implementation options
- Technical standards
- Service Interoperability Points, and
- The relationship with other profiles such as the system profile to which an application belongs.

017. The NISP now defines the **obligation status** of profiles and standards as "mandatory" or "candidate".

- **Mandatory:** The application of standards or profiles is enforced for NATO common funded systems in planning, implementing and testing. Nations are required to use the NISP for developing capabilities that support NATO's missions (ie. NATO led operations, projects, programs, contracts and other related tasks). Nations are invited to do the same nationally to promote interoperability for federated systems and services.
- **Candidate:** The application of a standard or profile shall only be used for the purpose of testing and programme / project planning. The standard or profile must have progressed to a stage in its life-cycle and is sufficiently mature and is expected to be approved by the standardization body in the foreseeable future. This implies, that from a planning perspective, the respective standard or profile is expected to become mandatory during execution of the programme. A candidate standard or profile should not stay in volume 3 for more than 3 years.

018. Profiles shall be updated if referenced standards change. Profiles are dynamic entities by nature. NATO captures this dynamic situation by updating profiles once a year in the NISP. Profile owners are responsible for the versioning of their profiles. Profile reviews are required every 2 years by their owners to ensure their accuracy and continued relevance.

019. Proposed profiles (and standards) can be accepted as candidates in order to follow their developments and to decide if they can be promoted to mandatory standards and profiles. In some cases proposed standards and profiles can be readily accepted directly as mandatory.

020. Interoperability Profiles can reference other Interoperability Profiles to allow for maximal reuse.

021. Further information and guidance on creation of profiles is available in Appendix A.

## 2.3. BASIC STANDARDS PROFILE

022. Within the NISP, the "*Basic Standards Profile*" specifies the technical, operational, and business standards that are generally applicable in the context of the Alliance and the NATO Enterprise. For a specific context, such as Federated Mission Networking, separate profiles may

be defined that apply specifically to that context or related architectures. The standards that are cited may be NATO standards, or other agreed international and open standards.

023. As there is no overarching alliance architecture, each standard is associated with elements of the C3 Taxonomy. A distinction must be made between applicability of a standard, and conformance to the standard. If a standard is applicable to a given C3 Taxonomy element, any architecture that implements such an element need not be fully conformant with the standard. The degree of conformance may be judged based on the specific context of the project. For example, to facilitate information exchange between C2 and logistics systems it may be sufficient to implement only a subset of concepts as defined in JC3IEDM (STANAG 5525).

024. The “Basic Standards Profile” contains “agreed” as well as “candidate” standards.

## **2.4. CREATING RELATIONSHIPS TO OTHER CONCEPTS AND PLANNING OBJECTS WITHIN NATO**

025. Different initiatives and organizations have developed new concepts to govern developments in the interoperability domain. These concepts have logical relationship to the NISP.

### **2.4.1. Architecture Building Block**

026. An Architecture Building Block (ABB) is a constituent of the architecture model that describes a single aspect of the overall model <sup>1</sup>.

#### **2.4.1.1. Characteristics**

027. ABBs:

- Capture architecture requirements; e.g., business, data, application, and technology requirements
- Direct and guide the development of Solution Building Blocks

#### **2.4.1.2. Specification Content**

028. ABB specifications include the following as a minimum:

- Fundamental functionality and attributes: semantic, unambiguous, including security capability and manageability
- Interfaces: chosen set, supplied
- Interoperability and relationship with other building blocks

---

<sup>1</sup>TOGAF 9.1 Specification

- Dependent building blocks with required functionality and named user interfaces
- Map to business/organizational entities and policies

## **2.4.2. FMN Spiral Specifications**

029. Federated Mission Networking (FMN) Spiral<sup>2</sup> Specifications encompass "an evolutionary cycle that will raise the level of maturity of federated mission networking capabilities over time".

030. The FMN spiral specification contain the following sections

- architecture
- instructions
- profiles, and
- requirements specifications.

The Mandatory and Candidate FMN Spiral Profiles, in context for FMN Affiliates, are listed in the NISP Volumes 2 and 3.

## **2.4.3. Capability Packages**

031. Profiles will be referenced in the NISP for specified NATO Common Funded Systems or Capability Packages and may include descriptions of interfaces to National Systems where appropriate.

## **2.5. CRITERIA FOR SELECTING STANDARDS**

032. Any standard(s) listed in Volume 2 of the NISP shall:

- Be already approved by a NATO Standardization Tasking Authority or another non- NATO standards development organization (e.g. ISO, ANSI, ETSI, IEEE, IETF, W3C);
- Have an assigned responsible party within NATO that can provide relevant subject matter expertise;
- Be available in one of the NATO official languages;
- Support C3 Interoperability (including. people, processes and technology) and related NATO common funded Communication and Information Systems (CIS), including their development and operations;

---

<sup>2</sup>Annex B TO Volume I - Implementation Overview, NATO FMN Implementation Plan v4.0 dated: 23 September 2014, Terms and Definitions

- Enable the NATO Enterprise, NATO Nations and Partner Nations to develop interoperable C3 capabilities that support NATO's missions (i.e. NATO led operations, projects, programs, contracts and other related tasks).
- Any standard deviating from the criteria listed in this paragraph, can be recommended by the IP CaT for inclusion in the NISP and can be implemented after the approval of the C3B.

## **2.6. CRITERIA FOR SELECTING NON-NATO STANDARDS**

033. Any Non-NATO standard(s) listed in Volume 2 of NISP should:

- Have implementations from a cross-section of vendors available;
- Be utilized by the broader user community;
- Be developed in a consensus-based way;
- Be free from any legal issues (i.e. intellectual property rights);
- Meet NATO requirements;
- Be easily accessible to vendors;
- Have an open architecture, e.g. extensible for new technological developments,
- Be compatible with other NATO-agreed standards;
- Be stable (mostly recognized by related community/industry) and mature enough in terms of technology;
- Be measurable in terms of its compliance.

This page is intentionally left blank

## CHAPTER 3. ORGANIZATION OF THE NISP INFORMATION

034. This chapter gives an overview of the new structure of all three volumes.

### 3.1. NISP STRUCTURE

035. The structure of the NISP is organized to list and categorize the standards and profiles according to their usage in NATO. It contains three volumes:

- **Volume 1** - Introduction: This volume introduces basic concepts, provides the management framework for the configuration control of the NISP and the process for handling Request for Change (RFC). It includes also guidance on development of interoperability profiles.
- **Volume 2** - Agreed Interoperability Standards and Profiles: This volume lists agreed interoperability standards and profiles, mandatory for NATO common funded systems. These should support NATO and National systems today and new systems actually under procurement or specification.
- **Volume 3** - Candidate Interoperability Standards and Profiles: This Volume lists informative references to Standards and Interoperability Profiles, such as drafts of NATO specifications, that may be used as guidance for future programmes.

036. Volume 2 is normative for NATO common funded systems and Volume 3 is informative.

This page is intentionally left blank

## CHAPTER 4. INTEROPERABILITY IN SUPPORT OF CAPABILITY PLANNING

037. The following documents form the foundation to understand the embedding of NISP into NDPP and architecture work:

**Table 4.1. NDPP References**

| Document  | Document Reference                 |
|---|------------------------------------|
| Alliance C3 Strategy Information and Communication Technology to prepare NATO 2020 (20 July 2018) | Alliance C3 Strategy C-M(2018)0037 |
| Alliance C3 Policy (14 December 2018)   | C-M(2015)0041-REV2                 |
| NATO Defence Planning Process (NDPP)  | PO(2016)0655 (INV)                 |

038. The NATO Defence Planning Process (NDPP) is the primary means to identify the required capabilities and promote their timely and coherent development and acquisition by Allies and Partners. It is operationally driven and delivers various products which could support the development and evolution of more detailed C3 architecture and interoperability requirements. The development of NDPP products also benefits from input by the architecture and interoperability communities, especially the NISP, leading to a more coherent development of CIS capabilities for the Alliance.

039. The work on Enterprise, Capability, and programme level architecture will benefit from the NISP by selecting coherent sets of standards for profiles.

040. More information on how the NISP supports the NDPP can be found in Annex B.

This page is intentionally left blank

## CHAPTER 5. CONFIGURATION MANAGEMENT

041. The NISP is updated once a year to account for the evolution of standards and profiles.

042. Request for Change (RFC) to the NISP will be processed by the IP CaT, following the process in the graphic below:

**Figure 5.1. RFC Handling Process**

043. The RFC contains all information required for the NISP management by IP CaT; The detailed information about standard or profile is handed over as attachments to this form. A notional RFC form with example information is presented below:

## REQUEST FOR CHANGE PROPOSAL for the NATO

**Figure 5.2. RFC Notional Form**

044. The primary point of contact for RFC submission is the IP CaT. RFCs may be submitted to the IP CaT via the [Change web site](#) or via email to [herve.radiguet@act.nato.int](mailto:herve.radiguet@act.nato.int) with attachments.

045. Review of RFCs will be coordinated with the responsible C3 Board substructure organizations where appropriate.

046. The IP CaT reviews the submissions in dialog with national and international bodies. Based on that review, the RFC will be formally processed into the next version of the NISP; or returned to the originator for further details; or rejected. The IP CaT will attempt to address all RFCs submitted by 1 September into the next NISP release. RFCs submitted after this date may be considered for inclusion at the discretion of the IP CaT, or will be processed for the following NISP release.

## 5.1. NISP UPDATE PROCESS

047. The new NISP version is submitted to the C3 Board by end of the year after internal review by the IP CaT. The version under review is a snapshot in time of the status of standards and profiles.

048. The database of standards and profiles maintained by the IP CaT is the definitive source of the current status of standards and profiles.

### 5.1.1. Criteria for listing Standards and Profiles

049. Standards and profiles listed in Volume 2 of the NISP shall:

1. have an assigned responsible party that can provide relevant subject matter expertise, if no responsible party exists the IP CaT will create a temporary assignment,
2. be available in one of the NATO official languages,
3. support C3 Interoperability (incl. people, processes and technology) and related NATO common funded Communication and Information Systems (CIS) including their development and operations, and
4. enable the NATO Enterprise, NATO Nations and partner nations to develop interoperable capabilities that support NATO's missions (ie. NATO led operations, projects, programs, contracts and other related tasks).

050. In addition standards shall be approved already by a NATO Standardization Tasking Authority or another non-NATO standards development organization (e.g. ISO, ANSI, ETSI, IEEE, IETF, W3C).

051. Deviations from the rules listed above can be recommended by the IP CaT and approved by the C3B.

052. Given the rate of innovation in Information and Communication Technology (ICT), it is unsurprising that, NATO standards must be reviewed and updated regularly to keep pace with the state of the art and other international standards. The following criteria should be considered by responsible parties during their annual review of NATO Standards:

- Are all stakeholders' views are reflected in the Standardization Working Group?
  - End Users/ Operational Users
  - Implementers/Vendors
  - Technical Solutions Experts/Testers
  - Standards Experts
- Are all referenced basic standards and documents still valid?
- Are key terms consistent with agreed NATO Terminology?
- Does the standard contain conformance criteria?
- Were any issues with the standard identified during test events (e.g. CWIX, CIAV)?

- Are reference implementations<sup>1</sup> of the Standard available to vendors?

053. Some key criteria for inclusion of non-NATO standards into Volume 2 are

- Availability of implementations from a cross-section of vendors;
- Compatibility with other standards;
- Completeness. Does the standard meet the functional requirements?
- Extensibility. Can the standard easily add new technologies when they become available?;
- Stability/maturity. Is the standard based on well understood technology, and has it matured enough to ensure no major changes will occur through further refinements?
- Non-discriminatory. Was the standard developed in a consensus-based way?
- Testability. Conformance metrics. Can the standard be tested to prove compliance?
- Legitimacy. Freedom from legal issues.

054. Similar criteria are also applied for inclusion of Profiles into Volume 2. Profiles should follow the Profile Guidance in Volume 1, Appendix A, and the IPCaT reserves the right to adjust the data structure of a profile to align with the data model of the NISP.

055. Standards and profiles listed in Volume 3 are not subject to the above criteria as they are not (yet) mandatory.

### 5.1.2. Updating listed Standards and Profiles

- process RFCs together with related responsible parties,
- check if newer versions of
  - listed standards are published by the NATO Standardization Tasking Authority or another non-NATO standards development organization,
  - listed profiles are published by the respective development organization,
  - contact all responsible parties to assess if there is a continued need to keep standards and profiles within Volume 2.

---

<sup>1</sup>To facilitate interoperability and adoption in general the production of reference implementations and similar tools that vendors can use to bootstrap and test development efforts is critical. These reference tools help clarify the expected behavior described by the standard. If these tools are released under appropriate licenses, the tools themselves or components thereof can be directly integrated into vendor products, reducing the investment cost, and therefore the risk, of adoption and accelerating adoption efforts. For standards that rely on multiple parties, such as communications protocols between two different roles, having a reference implementation for both communicants can be a big help to implementers by giving them a correspondent against which to test their own implementation. As such, simple implementation efforts can have a significant role in encouraging interoperability and adoption.

## 5.2. NISP PRODUCTS

056. The NISP is published in several formats:

- Documentation in [HTML](#) and [PDF](#) Formats
- Website and searchable [online Database](#)
- Data export in ArchiMate Exchange File Format

DRAFT

## **CHAPTER 6. NATIONAL SYSTEMS INTEROPERABILITY COORDINATION**

057. Coordination of standards and profiles between Nations and NATO are critical for interoperability. As a result of the C3 Board substructure reorganization, participants in IP CaT are subject matter experts (SME) and are no longer national representatives. SME's should therefore coordinate with national and C3 Board representatives to ensure national perspectives are presented to IP CaT. As such, each of the IP CaT SMEs is responsible for:

- Appropriate and timely coordination of standards and profiles with respect to interoperability with national systems;
- Coordination of the SME input including coordination with national SMEs of other C3 Board substructure groups; and
- Providing appropriate technical information and insight based on national market assessment.

058. National level coordination of interoperability technical standards and profiles is the responsibility of the C3 Board. When the latest version of NISP is approved by the C3 Board, it will become the NATO Standard covered by STANAG 5524. This STANAG contains the agreement of the participating nations regarding usage of the mandatory standards and profiles in the NISP.

This page is intentionally left blank

## CHAPTER 7. INTEROPERABILITY STANDARDS GUIDANCE

059. The NISP references Standards from different standardization bodies<sup>1</sup>. In the case of a ratified STANAG, NATO standardization procedures apply. The NISP only references these STANAG's without displaying the country-specific reservations. The country-specific reservations can be found in the NATO Standardization Office's NATO Standardization Document Database.

060. The Combined Communications Electronics Board (CCEB) nations will use NISP Volume 2 to publish the interoperability standards for the CCEB under the provisions of the NATO-CCEB List of Understandings (LoU)<sup>2</sup>.

061. The NISP organizes the standards using the structure of baseline 5.0 of NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-D(2021)0021 on "C3 Taxonomy Baseline 5.0" dated 23 September 2021. A graphical representation of this taxonomy is given in the following figure and a description of it can be obtained at: [https://tide.act.nato.int/mediawiki/tidepedia/index.php/C3\\_Taxonomy\\_Baseline\\_5](https://tide.act.nato.int/mediawiki/tidepedia/index.php/C3_Taxonomy_Baseline_5). Currently, the standards only address a subset of the services in the taxonomy, mainly services in the group Technical Services. For some standards it is indicated that an appropriate mapping to the C3 Taxonomy could not yet be made.

---

<sup>1</sup>In case of conflict between any adopted non-NATO standard and relevant NATO standard, the definition of the latter prevails.

<sup>2</sup>References: NATO Letter AC/322(SC/5)L/144 of 18 October 2000, CCEB Letter D/CCEB/WS/1/16 of 9 November 2000, NATO Letter AC/322(SC/5)L/157 of 13 February 2001

**Figure 7.1. C3 Taxonomy**

062. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

063. However, a subset of documents may only be available for those nations or organizations, which are joining a specific mission or are members of a special working group. The membership in these activities is outside the scope of NISP.

DRAFT

## **CHAPTER 8. APPLICABILITY**

064. The mandatory standards and profiles documented in Volume 2 will be used in the implementation of NATO Common Funded Systems. Participating nations agree to use the mandatory standards and profiles included in the NISP at the Service Interoperability Points and to use Service Interface Profiles among NATO and Nations to support the exchange of information and the use of information services in the NATO realm.

## **APPENDIX A. PROFILE GUIDANCE**

### **A.1. PROFILE CONCEPTUAL BACKGROUND**

065. ISO/IEC TR 10000 [2] defines the concept of profiles as a set of one or more base standards and/or International Standardized Profiles, and, where applicable, the identification of chosen classes, conforming subsets, options and parameters of those base standards, or International Standardized Profiles necessary to accomplish a particular function.

066. The C3 Board (C3B) Interoperability Profiles Capability Team (IP CaT) has extended the profile concept to encompass references to NAF architectural views [1], characteristic protocols, implementation options, technical standards, Service Interoperability Points (SIOP), and related profiles.

067. Nothing in this guidance precludes the referencing of National profiles or profiles developed by non-NATO organizations in the NATO Interoperability Standards and Profiles (NISP).

### **A.2. PURPOSE OF INTEROPERABILITY PROFILES**

068. Interoperability Profiles aggregate references to the characteristics of other profiles types to provide a consolidated perspective.

069. Interoperability Profiles identify essential profile elements including Capability Requirements and other NAF architectural views [1], characteristic protocols, implementation options, technical standards, Service Interoperability Points, and the relationship with other profiles such as the system profile to which an application belongs.

070. NATO and Nations use profiles to ensure that all organizations will architect, invest, and implement capabilities in a coordinated way that will ensure interoperability for NATO and the Nations. Interoperability Profiles will provide context and assist or guide information technologists with an approach for building interoperable systems and services to meet required capabilities.

### **A.3. APPLICABILITY**

071. NISP stakeholders include engineers, designers, technical project managers, procurement staff, architects and other planners. Architectures, which identify the components of system operation, are most applicable during the development and test and evaluation phase of a project. The NISP is particularly applicable to a federated environment, where interoperability of mature National systems requires an agile approach to architectures.

072. The IP CaT has undertaken the development of interoperability profiles in order to meet the need for specific guidance at interoperability points between NATO and Nations systems

and services required for specific capabilities. As a component of the NISP, profiles have great utility in providing context and interoperability specifications for using mature and evolving systems during exercises, pre-deployment or operations. Application of these profiles also provides benefit to Nations and promotes maximum opportunities for interoperability with NATO common funded systems as well as national to national systems. Profiles for system or service development and operational use within a mission area enable Nations enhanced readiness and availability in support of NATO operations.

## **A.4. GUIDELINES FOR INTEROPERABILITY PROFILE DEVELOPMENT**

073. Due to the dynamic nature of NATO operations, the complex Command and Control structure, and the diversity of Nations and Communities of Interest (COI), interoperability must be anchored at critical points where information and data exchange between entities exists. The key drivers for defining a baseline set of interoperability profiles include:

- Identify the Service Interoperability Points and define the Service Interface Profiles
- Develop modular Architecture Building Blocks
- Use standards consistent with common architectures
- Develop specifications that are service oriented and independent of the technology implemented in National systems where practical
- Develop modular profiles that are reusable in future missions or capability areas
- Use an open system approach to embrace emerging technologies

074. The starting point for development of a profile is to clearly define the Service Interoperability Point where two entities will interface and the standards in use by the relevant systems.

075. The NISP is the governing authoritative reference for NATO interoperability profiles. Doctrine, Organization, Training, Materiel, Leadership and education, Personnel, Facilities and Interoperability (DOTMLPFI) capability analysis may result in a profile developer determining that some of the capability elements may not be relevant for a particular profile. In such cases, the "not applicable" sections may either be marked "not applicable" or omitted at the author's discretion.

## **A.5. STRUCTURE OF INTEROPERABILITY PROFILE DOCUMENTATION**

076. This section identifies typical elements of Interoperability Profile Documentation.

## A.5.1. Identification

077. Each NATO or candidate NATO Interoperability Profile **shall** have a unique identifier assigned to it when accepted for inclusion in the NISP. This **shall** be an alpha-numeric string appended to the root mnemonic from the NISP profile taxonomy.

## A.5.2. Profile Elements

078. Profile elements provide a coherent set of descriptive inter-related information to NATO, national, Non-Governmental Organization (NGO), commercial and other entities ('actors') desiring to establish interoperability.

079. Profiles are not concepts, policies, requirements, architectures, patterns, design rules, or standards. Profiles provide context for a specific set of conditions related to the aforementioned documents in order to provide guidance on development of systems, services, or even applications that must consider all of these capability related products. Interoperability Profiles provide the contextual relationship for the correlation of these products in order to ensure interoperability is 'built-in' rather than considered as an 'after-thought'.

### A.5.2.1. Applicable Standards

080. Each profile **should** document the standards required to support this or other associated profiles and any implementation specific options. The intention of this section is to provide an archive that shows the linkage between evolving sets of standards and specific profile revisions.

**Table A.1. Applicable Standards**

| ID                          | Purpose/Service                         | Standards   | Guidance   |
|-----------------------------|---|---|--|
| A unique profile identifier | A description of the purpose or service | A set of relevant Standard Identifier from the NISP | Implementation specific guidance associated with this profile (may be a reference to a separate annex or document) |

### A.5.2.2. Related Profiles

081. Each profile should document other key related system or service profiles in a cross reference table. The intention of this section is to promote smart configuration management by including elements from other profiles rather than duplicating them in part or in whole within this profile. Related profiles would likely be referenced in another section of the profile.

**Table A.2. Related Profiles**

| <b>Profile ID</b>           | <b>Profile Description</b>         | <b>Community of Interest</b>           | <b>Associated SIOPs</b> |
|-----------------------------|------------------------------------|--|-------------------------|
| A unique profile identifier | A short description of the profile | Air, Land, Maritime, Special Ops, etc. | Unique SIOP identifiers |

## **A.6. VERIFICATION AND CONFORMANCE**

082. Each profile **should** identify authoritative measures to determine verification and conformance with agreed quality assurance, Key Performance Indicators (KPIs), and Quality of Service standards such that actors are satisfied they achieve adequate performance. All performance requirements must be quantifiable and measurable; each requirement must include a performance (what), a metric (how measured), and a criterion (minimum acceptable value).

083. Stakeholders are invited to provide feedback to improve a profile's verification and conformance criteria.

084. Verification and Conformance is considered in terms of the following five aspects:

1. Approach to Validating Service Interoperability Points
2. Relevant Maturity Level Criteria
3. Key Performance Indicators (KPIs)
4. Experimentation
5. Demonstration

### **A.6.1. Approach to Validating Service Interoperability Points**

085. Each profile should describe the validation approach used to demonstrate the supporting service interoperability points. The intention of this section is to describe a high-level approach or methodology by which stakeholders may validate interoperability across the SIOP(s).

### **A.6.2. Relevant Maturity Level Criteria**

086. Each profile should describe the Maturity criteria applicable to the profile. The intention of this section is to describe how this profile supports the achievement of improved interoperability.

### **A.6.3. Key Performance Indicators (KPIs)**

087. Each profile should describe the associated Key Performance Indicators (KPIs) to establish a baseline set of critical core capability components required to achieve the enhanced

interoperability supported by this profile. The intention of this section is to assist all stakeholders and authorities to focus on the most critical performance-related items throughout the capability development process.

**Table A.3. Key Performance Indicators (KPIs)<sup>1</sup>**

| Key Performance Indicators (KPI)     | Description |
|--------------------------------------|-------------|
| KPI #1: Single (named) Architecture  |             |
| KPI #2: Shared Situational Awareness |             |
| KPI #3: Enhanced C2                  |             |
| KPI #4: Information Assurance        |             |
| KPI #5: Interoperability             |             |
| KPI #6: Quality of Service           |             |
| KPI #7: TBD                          |             |

<sup>1</sup>'notional' KPIs shown in the table are for illustrative purposes only.

## A.6.4. Experimentation

088. Each profile should document experimentation venues and schedules that will be used to determine conformance. The intention of this section is to describe how experimentation will be used to validate conformance.

## A.6.5. Demonstration

089. Each profile should document demonstration venues and schedules that demonstrate conformance. The intention of this section is to describe how demonstration will be used to validate conformance.

# A.7. CONFIGURATION MANAGEMENT AND GOVERNANCE

## A.7.1. Configuration Management

090. Each profile **shall** identify the current approach or approaches toward configuration management (CM) of core documentation used to specify interoperability at the Service Interoperability Point. The intention of this section is to provide a short description of how often documents associated with this profile may be expected to change, and related governance measures that are in place to monitor such changes [e.g., the IP CaT].

## A.7.2. Governance

091. Each profile **shall** identify **one or more authorities** to provide feedback and when necessary, Request for Change (RFC) for the Profile in order to ensure inclusion of the most

up-to-date details in the NISP. The intention of this section is to provide a clear standardized methodology by which stakeholders may submit recommended changes to this profile.

## **APPENDIX B. INTEROPERABILITY IN THE CONTEXT OF NATO DEFENCE PLANNING**

### **B.1. NATO DEFENCE PLANNING**

092. The NATO Defence Planning Process (NDPP) is the primary means to identify required capabilities and promote their timely, coherent development and acquisition by Allies and the NATO Enterprise. It is operationally driven and delivers various products which could support the development and evolution of more detailed C3 architecture and interoperability requirements. The development of NDPP products also benefits from input by the architecture and interoperability communities, especially the NISP, leading to a more coherent development of CIS capabilities for the Alliance.

093. Ideally technical interoperability requirements align with the NDPP to ensure coherence in the development of capabilities within the Alliance. NDPP Mission Types and Planning Situations provide the essential foundation for the development of the Minimum Capability Requirements (MCR) and the derivation of high level information exchange and interoperability requirements. MCRs are expressed via a common set of definitions for capabilities (including CIS) called Capability Codes and Statements (CC&S), including explicit reference to STANAGs in some cases<sup>1</sup>. Interoperability aspects are primarily captured in free text form within the Capability Statements and in the subsequent NDPP Targets<sup>2</sup>. The NDPP products could be leveraged by the architecture and interoperability community, to define the operational context for required Architecture Building Blocks and interoperability profiles.

094. The Defence Planning Capability Survey (DPCS) is the tool to collect information on national capabilities, the architecture and interoperability communities should provide input on questions related to C3 related capabilities. The architecture and interoperability communities could also bring valuable insight and expertise to the formulation and tailoring of C3 capabilities-related targets to nations, groups of nations or the NATO enterprise.

095. In practice, there is not always an opportunity (time or money) for such a "clean" approach and compromises must be made - from requirements identification to implementation. In recognition of this fact, NATO has developed a parallel track approach, which allows some degree of freedom in the systems development. Although variations in sequence and speed of the different steps are possible, some elements need to be present. Architecture, including the selection of appropriate standards and technologies, is a mandatory step.

096. In a top-down execution of the systems development approach, architecture will provide guidance and overview to the required functionality and the solution patterns, based on longstanding and visionary operational requirements. In a bottom-up execution of the approach, which may be required when addressing urgent requirements and operational imperatives,

---

<sup>1</sup>Bi-SC Agreed Capability Codes and Capability Statements, 29 July 2016 and SH/SDP/SDF/CFR/DPF/20-006166 and ACT/SPP/DP/TT-2897/Ser:NU0074 issued on 29 July 2020.

<sup>2</sup>C-M(2017)0021, NATO Capability Targets, 26 June 2017

architecture will be used to assess and validate chosen solution in order to align with the longer term vision.

097. The NISP is a major tool supporting NATO architecture work and must be suitable for use in the different variations of the systems development approach. The NISP will be aligned with the Architectural efforts of the C3 Board led by the ACaT.

098. The relationship of the NISP, the Architecture Building Blocks activities of the ACaT, and Allied Command Transformation Architecture efforts is of a mutual and reciprocal nature. Architecture products provide inputs to the NISP by identifying the technology areas that in the future will require standards. These architecture products also provide guidance on the coherence of standards by indicating in which timeframe certain standards and profiles are required. NATO Architectures benefit from the NISP by selecting coherent sets of standards from profiles.

## APPENDIX C. CHANGES

099. Major content changes from NISP Version 14 / ADatP-34(N)(1) to NISP Version 15 / ADatP-34(N)(2) include:

- Draft FMN Spiral 5 Profile added as candidate (Vol 3).
- 55 RFCs processed. Details of the RFC changes are captured in Appendix E.
- Removed C3 Taxonomy v4
- Added C3 Taxonomy v5
- Major cleanup of the NISP database

This page is intentionally left blank

## APPENDIX D. DETAILED CHANGES

100. Detailed content changes from NISP Version 14 / ADatP-34(N)(1) to NISP Version 15 / ADatP-34(N)(2) includes:

### D.1. Added Standards

#### D.1.1. ASCA

- Common Technical Interface Design Plan (CTIDP) (ASCA ASCA-012:2021)

#### D.1.2. CCEB

- Communications Instructions Tape Relay Procedures (CCEB ACP 127(G):1988)

#### D.1.3. CIS3 C&IP

- SCIP Signalling Plan rev.3.10 (CIS3 C&IP SCIP-210 3.10:2017)

#### D.1.4. DIGWG

- Defence Profile of OGC Web Coverage Service 2.0 (DIGWG DGIWG-119:2017)
- Defence Profile of OGC Web Feature Service 2.0 (DIGWG DGIWG-122:2019)
- Defense Gridded Elevation Data (DGED) Product Implementation Profile (DIGWG DGIWG-250:2020)

#### D.1.5. DMTF

- Open Virtualization Format Specification Ver 2.1.1 (DMTF DMTF OVF 2.1.1 (DSP0243):2015)

#### D.1.6. IETF

- DNS Extensions to Support IP Version 6 (IETF RFC 3596:2003)
- Unique Local IPv6 Unicast Addresses (IETF RFC 4193:2005)
- An Extensible Markup Language (XML) Patch Operations Framework Utilizing XML Path Language (XPath) Selectors (IETF RFC 5261:2008)
- PATCH Method for HTTP (IETF RFC 5789:2010)
- Using 127-Bit IPv6 Prefixes on Inter-Router Links (IETF RFC 6164:2011)
- Web Host Metadata (IETF RFC 6415:2011)
- JSON Merge Patch (IETF RFC 7396:2014)
- JSON Web Token (JWT) (IETF RFC 7519:2015)
- JSON Web Token (JWT) Profile for OAuth 2.0 Client Authentication and Authorization Grants (IETF RFC 7523:2015)

- IPv6 Support for Generic Routing Encapsulation (GRE) (IETF RFC 7676:2015)
- Security and Privacy Considerations for IPv6 Address Generation Mechanisms (IETF RFC 7721:2016)
- Proof-of-Possession Key Semantics for JSON Web Tokens (JWTs) (IETF RFC 7800:2016)
- RESTCONF Protocol (IETF RFC 8040:2017)
- Internet Protocol, Version 6 (IPv6) Specification (IETF RFC 8200:2017)
- Path MTU Discovery for IP version 6 (IETF RFC 8201:2017)
- Default External BGP (EBGP) Route Propagation Behavior without Policies (IETF RFC 8212:2017)
- The JavaScript Object Notation (JSON) Data Interchange Format (IETF RFC 8259:2017)
- OAuth 2.0 Authorization Server Metadata (IETF RFC 8414:2018)
- Elliptic Curve Cryptography (ECC) Cipher Suites for Transport Layer Security (TLS) Versions 1.2 and Earlier (IETF RFC 8422:2018)
- The Transport Layer Security (TLS) Protocol Version 1.3 (IETF RFC 8446:2018)
- Policy Behavior for Well-Known BGP Communities (IETF RFC 8642:2019)
- OAuth 2.0 Token Exchange (IETF RFC 8693:2020)
- Resource Indicators for OAuth 2.0 (IETF RFC 8707:2020)
- Secret Key Transaction Authentication for DNS (TSIG) (IETF RFC 8945:2020)
- JSON Web Token (JWT) Profile for OAuth 2.0 Access Tokens (IETF RFC 9068:2021)

### **D.1.7. ISO/IEC**

- Technical Corrigendum 1 to International Standard ISO/IEC 12087-5:1998 (ISO/IEC 12087-5 Cor 1:2001)
- Technical Corrigendum 2 to International Standard ISO/IEC 12087-5:1998 (ISO/IEC 12087-5 Cor 2:2002)
- JPEG 2000 image coding system — Part 1: Core coding system (ISO/IEC 15444-1:2019)
- The Directory: Public-key and attribute certificate frameworks (ISO/IEC 9594-8:2020)
- Computer graphics and image processing — Portable Network Graphics (PNG): Functional specification (ISO/IEC 15948:2004)
- Generic coding of moving pictures and associated audio information — Part 7: Advanced Audio Coding (AAC) — Amendment 1: Transport of MPEG Surround in AAC (ISO/IEC 13818-7:2006/Amd 1:2007)
- Generic coding of moving pictures and associated audio information — Part 7: Advanced Audio Coding (AAC) — Technical Corrigendum 1 (ISO/IEC 3818-7:2006/Cor 1:2009)
- Generic coding of moving pictures and associated audio information — Part 7: Advanced Audio Coding (AAC) — Technical Corrigendum 2 (ISO/IEC 3818-7:2006/Cor 2:2010)
- Coding of audio-visual objects — Part 10: Advanced video coding (ISO/IEC 14496-10:2022)

### **D.1.8. ITU-T**

- Internet protocol data communication service - IP packet transfer and availability performance parameters (ITU-T Y.1540 (12/19):2019)

### **D.1.9. MIL-STD**

- Connector, Fibre Optic, Circular Hermaphroditic, Bulkhead, Low Profile Without Strain Relief, Jam-Nut Mount, 2 and 4 Positions, Expanded Beam (MIL-STD MIL-DTL-83526C:2006)

### **D.1.10. MIP**

- MIP Information Model 5.1 (MIP MIM 5.1:2020)

### **D.1.11. NATO**

- VLF / LF MSK Multi Channel Broadcast (NATO AComP-4724 Ed B Ver 1:2021)
- IP access to half-duplex radio networks (NATO AComP-5634 Ed A Ver 1:2022)
- NATO High Capacity Data Rate Waveform (NHCDRWF) - Head Specification (NATO AComP-5649 (Study) I Ed A Ver 1)
- NATO High Capacity Data Rate Waveform (NHCDRWF) - Link/Network Layer Specification (NATO AComP-5649 (Study) II Ed A Ver 1)
- NATO High Capacity Data Rate Waveform (NHCDRWF) - Modem Specification (NATO AComP-5649 (Study) III Ed A Ver 1)
- NATO HDRWF (ESSOR) Introductory Document (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 1)
- HDR WF (ESSOR) LLC Layer Specification and Rationale (SSS) / Interface Control Document (ICD) (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 10)
- HDR WF (ESSOR) NET Layer Specification and Rationale (SSS) / Interface Control Document (ICD) (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 11)
- HDR WF (ESSOR) NET Layer Specification and Rationale (SSS) / Interface Control Document (ICD) Restricted Volume (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 12)
- HDR WF (ESSOR) MGT Layer Specification (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 13)
- HDR WF (ESSOR) MGT Layer Specification - Restricted volume (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 14)
- NATO HDRWF (ESSOR) System Specification (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 2)
- NATO HDRWF (ESSOR) System Specification – Restricted Volume (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 3)
- NATO HDRWF (ESSOR) System Specification – Confidential Volume (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 4)
- NATO HDRWF (ESSOR) System Specification – Security Target (Restricted) (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 5)
- NATO HDRWF (ESSOR) System Design Document (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 6)

- HDR WF (ESSOR) PHY Layer Specification and Rationale (SSS) / Interface Control Document (ICD) – Restricted (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 7)
- HDR WF (ESSOR) MAC Layer Specification and Rationale (SSS) / Interface Control Document (ICD) (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 8)
- HDR WF (ESSOR) MAC Layer Specification and Rationale (SSS) / Interface Control Document (ICD) – Restricted Volume (NATO AComP-5651 (Study) Ed A Ver 1 - Vol 9)
- Networking and Information Infrastructure (NII) Internet Protocol (IP) Network Encryptor – Interoperability Specification (NINE ISPEC) (NATO AComp-4787 Ed A Ver 1:2018)
- Narrowband Waveform for VHF/UHF Radios - Head Specification (NATO AComP-5630 Ed A Ver 1:2019)
- Narrowband Waveform for VHF/UHF Radios - Physical Layer and Propagation Models (NATO AComP-5631 Ed A Ver 1:2019)
- Narrowband Waveform for VHF/UHF Radios - Link Layer (NATO AComP-5632 Ed A Ver 1:2019)
- Narrowband Waveform for VHF/UHF Radios - Network Layer (NATO AComP-5633 Ed A Ver 1:2019)
- Concept of NATO Message Text Formatting System (CONFORMETS) (NATO ADatP-03 Ed A Ver 4:2021)
- Friendly Force Tracking Systems (FFTS) Interoperability (NATO ADatP-36 Ed A Ver 2:2021)
- Profiles for Binding Metadata to a Data Object (NATO ADatP-4778.2 Ed A Ver 1:2020)
- NATO Core Metadata Specification (NATO ADatP-5636 Ed A Ver 1:2022)

- Configuration Management Database (CMDB) Federation Specification (DMTF DSP0252:2010)

## D.2.3. IEEE

- Distributed Interactive Simulation (DIS) - Exercise Management and Feedback (IEEE P1278.3:1996)

## D.2.4. IETF

- Open Network Computing (ONC) Remote Procedure Call (RPC) Specification version 2 (IETF RFC 1057:1988)
- PPP LCP Extensions (IETF RFC 1570:1994)
- Extensions to OSPF to support demand circuits (IETF RFC 1793:1995)
- The LDAP Application Program Interface (IETF RFC 1823:1995)
- An Application of the BGP Community Attribute in Multi-Home Routing (IETF RFC 1998:1996)
- IP Encapsulation within IP (IETF RFC 2003:1996)
- Portable Network Graphics (PNG) Specification, v. 1.0 (IETF RFC 2083:1997)
- ISO Transport Service on top of TCP (ITOT) (IETF RFC 2126:1997)
- Resource ReSerVation Protocol (RSVP) -- Version 1 Functional Specification (IETF RFC 2205:1997)
- RSVP Management Information Base using SMIPv2 (IETF RFC 2206:1997)
- RSVP Extensions for IPSEC Data Flows (IETF RFC 2207:1997)
- Resource ReSerVation Protocol (RSVP) -- Version 1 Applicability Statement Some Guidelines on Deployment (IETF RFC 2208:1997)
- Resource ReSerVation Protocol (RSVP) -- Version 1 Message Processing Rules (IETF RFC 2209:1997)
- The Use of RSVP with IETF Integrated Services (IETF RFC 2210:1997)
- FTP Security Extensions (IETF RFC 2228:1997)
- Using LDAP as a Network Information Service (IETF RFC 2307:1998)
- IPv6 Multicast Address Assignments (IETF RFC 2375:1998)
- FTP Extensions for IPv6 and NATs (IETF RFC 2428:1998)
- A Provider Architecture for Differentiated Services and Traffic Engineering (PASTE) (IETF RFC 2430:1998)
- Transmission of IPv6 Packets over Ethernet Networks (IETF RFC 2464:1998)
- Transmission of IPv6 Packets over FDDI Networks (IETF RFC 2467:1998)
- Generic Packet Tunneling in IPv6 (IETF RFC 2473:1998)

- A Simulation Model for IP Multicast with RSVP (IETF RFC 2490:1999)
- IPv6 over Non-Broadcast Multiple Access (NBMA) networks (IETF RFC 2491:1999)
- IP Header Compression (IETF RFC 2507:1999)
- Compressing IP/UDP/RTP Headers for Low-Speed Serial Links (IETF RFC 2508:1999)
- Lightweight Directory Access Protocol (LDAP) v3 - Extensions for Dynamic Directory Services (IETF RFC 2589:1999)
- Internationalization of the File Transfer Protocol (IETF RFC 2640:1999)
- An LDAP Control and Schema for Holding Operation Signatures (IETF RFC 2649:1999)
- LDAP Control Extension for Simple Paged Results Manipulation (IETF RFC 2696:1999)
- Multicast Listener Discovery (MLD) for IPv6 (IETF RFC 2710:1999)
- IPv6 Router Alert Option (IETF RFC 2711:1999)
- RSVP Diagnostic Messages (IETF RFC 2745:2000)
- RSVP Operation Over IP Tunnels (IETF RFC 2746:2000)
- RSVP Cryptographic Authentication (IETF RFC 2747:2000)
- COPS usage for RSVP (IETF RFC 2749:2000)
- RSVP Extensions for Policy Control (IETF RFC 2750:2000)
- A Framework for Policy-based Admission Control (IETF RFC 2753:2000)
- Encryption using KEA and SKIPJACK (IETF RFC 2773:2000)
- SBM (Subnet Bandwidth Manager): A Protocol for RSVP-based Admission Control over IEEE 802-style networks (IETF RFC 2814:2000)
- LDAP Control Extension for Server Side Sorting of Search Results (IETF RFC 2891:2000)
- Router Renumbering for IPv6 (IETF RFC 2894:2000)
- RSVP Refresh Overhead Reduction Extensions (IETF RFC 2961:2001)
- Format of the RSVP DCLASS Object (IETF RFC 2996:2000)
- Framework for Integrated Services Operation over Diffserv Networks (IETF RFC 2998:2000)
- Traditional IP Network Address Translation (NAT) (IETF RFC 3022:2001)
- Multiprotocol Label Switching Architecture (IETF RFC 3031:2001)
- MPLS Label Stack Encoding (IETF RFC 3032:2001)
- Storing Vendor Information in the LDAP root DSE (IETF RFC 3045:2001)
- Connection of IPv6 Domains via IPv4 Clouds (IETF RFC 3056:2001)
- LDAP Password Modify Extended Operation (IETF RFC 3062:2001)
- Differentiated Services Per Domain Behaviours and Rules for their Specification (IETF RFC 3086:2001)
- Service Location Protocol Modifications for IPv6 (IETF RFC 3111:2001)
- Extensions to IPv6 Neighbor Discovery for Inverse Discovery Specification (IETF RFC 3122:2001)
- Transmission of IPv6 Packets over IEEE 1394 Networks (IETF RFC 3146:2001)
- RADIUS and IPv6 (IETF RFC 3162:2001)
- Aggregation of RSVP for IPv4 and IPv6 Reservations (IETF RFC 3175:2001)
- Signalled Preemption Priority Policy Element (IETF RFC 3181:2001)
- Identity Representation for RSVP (IETF RFC 3182:2001)
- RSVP-TE: Extensions to RSVP for LSP Tunnels (IETF RFC 3209:2001)
- Applicability Statement for Extensions to RSVP for LSP-Tunnels (IETF RFC 3210:2001)

- IANA Assigned Numbers (IETF RFC 3232:2002)
- Stream Control Transmission Protocol Applicability Statement (IETF RFC 3257:2002)
- New Terminology and Clarifications for Diffserv (IETF RFC 3260:2002)
- Stream Control Transmission Protocol - Introduction (IETF RFC 3286:2002)
- Remote Monitoring MIB Extensions for Differentiated Services (IETF RFC 3287:2002)
- Management Information Base for the Differentiated Services Architecture (IETF RFC 3289:2002)
- Informal Management Model for Diffserv Routers (IETF RFC 3290:2002)

## APPENDIX E. PROCESSED RFCS

101. The following RFC have been processed::

| <b>RFC #</b> | <b>Title</b>  | <b>Origin</b> |
|--------------|---|---------------|
| 11-004       | Remove STANAG 5067 Ed 1   | NCIA          |
| 14-001a      | Replace STANAG 5511 Ed 4 with ATDLP 5.11 Ed. B Ver 1 in BSP   | TDL           |
| 14-001b      | Replace STANAG 5516 Ed 4 with ATDLP 5.16 Ed. B Ver 1 in BSP   | TDL           |
| 14-001c      | Replace STANAG 5518 Ed 1 with ATDLP 5.18 Ed. B Ver 2 in BSP   | TDL           |
| 14-001d      | Update ATDLP-5.01 Ed A Ver 1 to ATDLP-5.01 Ed A Ver 2 in the BSP                                    | TDL           |
| 14-001e      | Remove ATDLP-7.03 Ed B Ver 1 from NISP BSSP for Informal_Messaging_Services                         | TDL           |
| 14-002       | For all AEP-76 standards: change RP to LCGDSS and harmonize all publications numbers.               | NHQ/CNAD      |
| 14-003       | Remove STANAG 4312 Ed 2   | CNAD          |
| 14-004       | Remove STANAG 4292 Ed 2   | LOS Comms CaT |
| 14-005       | Update ADatP-03 Ed A Ver 3 to ADatP-03 Ed A Ver 4   | MTF CaT       |
| 14-006       | Remove CIM, DSP 004, DSP 0226, DSP 0227, DSP 0252 & CIM Schema                                      | SMC CaT       |
| 14-007a      | Add AGeoP-26 Ed B Ver 1 as candidate standard in Geospatial Services                                | GRWG/JGSWG    |
| 14-012       | CaP 2/FFT WG and CaP 2/IFF WG replaced as RP with CaP 2   | CaP 2         |

## APPENDIX F. ARCHIMATE EXCHANGE FORMAT

102. The C3B have tasked IP CaT to improve the consistency and usability of NISP. IP CaT have therefore in "A standard representation and exchange specification for Interoperability Standards and Profiles" ver 0.8 dated Dec 10, 2020 (AC-322-WP(2020)0036) specified a semantic representation of the data set contained in the NISP as an architecture model in the Open Group ArchiMate Modelling Language so that this model can be exchanged via the ArchiMate Model Exchange File Format Standard between tools and/or systems that can import, and export ArchiMate models. ArchiMate Exchange Files enable exporting content from one ArchiMate modelling tool or repository and importing it into another while retaining information describing the model in the file and how it is structured, such as a list of model elements and relationships. Extensions of ArchiMate are specified in accordance with the Language Customization Mechanisms and where possible re-use metadata elements defined by the NATO Core Metadata Specification (NCMS) to limit the definition of NISP specific metadata requirements.

## **NATO LETTER OF PROMULGATION**

The enclosed Allied Data Publication ADatP-34, Edition N, Version 2 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition N, Version 2 is effective on receipt and supersedes ADatP-34, Edition N, Version 1 which shall be destroyed in accordance with the local procedure for the destruction of documents.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Dimitrios SIGOULAKIS  
Lieutenant General, GRC (A)  
Director, NATO Standardization Office

## CHAPTER 1. INTRODUCTION

001. Volume 2 of the NISP focuses on agreed interoperability standards and profiles.

002. The NISP references Standards from different standardization bodies<sup>1</sup>. In the case of a ratified STANAG, NATO Standardization procedures apply. The NISP only references these STANAG's without displaying the country-specific reservations. The country-specific reservations can be found in the NATO Standardization Office's NATO Standardization Document Database (NSDD).

003. The Combined Communications Electronics Board (CCEB) nations will use NISP Volume 2 Chapter 3 and Section 3.3 tables to publish the interoperability standards for the CCEB under the provisions of the NATO-CCEB List of Understandings (LoU)<sup>2</sup>.

### 1.1. SCOPE

004. The scope of this volume includes:

- Identifying the standards and technologies that are relevant to a service oriented environment,
- Describing the standards and technologies to support federation.

---

<sup>1</sup>In case of conflict between any recommended non-NATO standard and relevant NATO standard, the definition of the latter prevails.

<sup>2</sup>References: NATO Letter AC/322(SC/5)L/144 of 18 October 2000, CCEB Letter D/CCEB/WS/1/16 of 9 November 2000, NATO Letter AC/322(SC/5)L/157 of 13 February 2001

## **CHAPTER 2. REFERENCE MODELS: TRANSITION FROM PLATFORM CENTRIC TO SERVICE ORIENTED MODELS**

005. Information technology has undergone a fundamental shift from platform-oriented computing to service-oriented computing. Platform-oriented computing emerged with the widespread proliferation of personal computers and the global business environment. These factors and related technologies have created the conditions for the emergence of network-oriented computing. This shift from platform to network is what enables the more flexible and more dynamic network-oriented operation. The shift from viewing NATO and partner Nations as independent to viewing them as part of a continuously adapting network ecosystem fosters a rich information sharing environment.

006. This shift is most obvious in the explosive growth of the Internet, intranets, and extranets. Internet users no doubt will recognize transmission control protocol/internet protocol (TCP/IP), hypertext transfer protocol (HTTP), hypertext markup language (HTML), Web browsers, search engines, and Java<sup>1</sup> Computing. These technologies, combined with high-volume, high-speed data access (enabled by the low-cost laser) and technologies for high-speed data networking (switches and routers) have led to the emergence of network-oriented computing. Information “content” now can be created, distributed, and easily exploited across the extremely heterogeneous global computing environment. The “power” or “payoff” of network-oriented computing comes from information-intensive interactions between very large numbers of heterogeneous computational nodes in the network, where the network becomes the dynamic information grid established by interconnecting participants in a collaborative, coalition environment. At the structural level, network-enabled warfare requires an operational architecture to enable common processes to be shared.

007. One of the major drivers for supporting net-enabled operations is Service-Oriented Architectures (SOA). SOA is an architectural style that leverages heterogeneity, focuses on interfaces between services and as such this approach is inherently platform-neutral. It is focused on the composition of Services into flexible processes and is more concerned with the Service interface and above (including composition metadata, security policy, and dynamic binding information), more so than what sits beneath the abstraction of the Service interface. SOA requires a different kind of platform, because runtime execution has different meanings within SOA. SOA enables users and process architects to compose Services into processes, and then manage and evolve those processes, in a declarative fashion. Runtime execution of such processes is therefore a metadata-centric operation of a different kind of platform -- a Service-oriented composite application platform.

008. Service-enabled operations are characterized by new concepts of speed of command and self-synchronization.

---

<sup>1</sup>Registered Trademark of ORACLE and/or its affiliates. Other names may be the trademarks of their respective owners.

009. The most important SOA within an enterprise is the one that links all its systems. Existing platforms can be wrapped or extended in order to participate in a wider SOA environment. NATO use of the NISP will provide a template for new systems development, as well as assist in defining the path for existing systems to migrate towards net-enabled operations.

## CHAPTER 3. STANDARDS

### 3.1. INTRODUCTION

010. The purpose of this chapter is to specify the agreed NISP standards. The document organizes these standards, following baseline 5.0 of NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-D(2021)0021 on "C3 Taxonomy Baseline 5.0" dated 23 September 2021. A graphical representation of this taxonomy is included in volume 1.

011. For some standards it was not clear yet which service identified in the C3 Taxonomy should be used. Therefore, as an interim solution, the taxonomy was extended with e.g. user-defined "Cloud Services". In a separate section, all standards are listed for which could not yet be defined how they should be linked to the C3 Taxonomy.

012. The standards are presented in tabular form. Each table represent a subtree from the C3 taxonomy and each table line (marked in bold and spanning all columns in the table) represents a taxonomy node from the subtree. Under each taxonomy node title, all standards which are mapped to the node are listed with the following attributes: title of the standard; where possible, a link to the standard; publication number of the standard<sup>1</sup>; a list of all the capability profiles where the standard is used; and finally the "responsible party" which is the domain expert that advises NATO about the standard. In general, a taxonomy node is only listed if at least one standard is assigned to this taxonomy node.

013. When STANAG X Ed Y is in ratification process, this is indicated by STANAG (RD) X Ed Y, and when it is a study draft, this is indicated by STANAG (Study) X Ed Y.

#### 3.1.1. Releasability Statement

014. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

### 3.2. USER APPLICATIONS

| Title  | Pubnum                        | Profiles     | Responsible Party |
|--|-------------------------------|--------------|-------------------|
| <b>Architecture Management Application</b>   |                               |              |                   |
| <a href="#">NATO Interoperability Standards and Profile eXchange Specification</a> | C3B AC/322-D(2017)0007-U:2017 | BSP          | C3B IP iCaT       |
| <a href="#">NATO Architecture Framework v4</a>                                     | C3B AC/322-N(2018)-0002:2018  | ARCHITECTURE | C3B Arch iCaT     |

### 3.3. TECHNICAL SERVICES

015. The “Technical Services” include those services required to enable “User Applications”. They are part of the “Back-End Capabilities” while “User Applications” are part of “User-Facing Capabilities”.

016. According to the C3 Taxonomy, they consist of “Community Of Interest (COI) Services”, “Core Services” and “Communications Services”. The complete collection of Technical Services is sometimes referred to as the “Technical Services Framework” (TSF) or “NNEC Services Framework” (NSF).

017. In addition to the “Technical Services” identified in the C3 Taxonomy, a taxonomy layer “Cloud Computing” has been added. This enables a more useful categorization of cloud-based standards (currently only included as candidate standards).

#### 3.3.1. Community Of Interest (COI) Services

## CHAPTER 4. AGREED PROFILES

### 4.1. INTRODUCTION

018. The NATO Interoperability Standards and Profiles include the set of Agreed Profiles listed below.

**Table 4.1. Agreed Profiles**

| Service Area   | Title   |
|--|---|
| <b>Abstract</b>  |   |
| URI  | ID  |
| <b>Federated Mission Networking</b>  | FMN Spiral 3 Profile  |
| This document defines the Standards Profile for Federated Mission Networking (FMN) Spiral 3. The FMN Standards Profiles provides a suite of interoperability standards and other standardized profiles for interoperability of selected community of interest services, core services and communications services in a federation of mission networks. It places the required interoperability requirements, standards and specifications in context for FMN Affiliates. |   |
| <a href="#">FMN Spiral 3 Profile</a>   | FMN3  |
| <b>Federated Mission Networking</b>  | FMN Spiral 4 Profile  |
| Federated Mission Networking is founded on a service-oriented approach. The interoperability standards applicable to these services are identified and specified in line with the C3 Taxonomy. Similarly, the breakdown of the standards profiles more or less follows the taxonomy.   |   |
| <a href="#">FMN Spiral 4 Overview of Standards and Profiles</a>  | FMN4  |
| <b>Architecture</b>  | Profile for the Architecture development  |
| This profile lists recommended standards for miscellaneous architecture related subjects.  |   |
| <a href="#">architecture-profile.pdf</a>   | ARCHITECTURE  |
| <b>Archive</b>   | Profile for the Long Term Preservation of NATO Digital Information of Permanent value |
| Outlines the file formats and package structures approved by the Archives Committee for the long-term preservation of NATO digital information of permanent value.   |   |
| <a href="#">NISP-V2-archive-profile.pdf</a>  | ARCHIVE-ARCHIVE   |
| <b>Security Services</b>   | Service Interface Profile Security Services   |

| Service Area   | Title   |
|--|---|
| <b>Abstract</b>  |   |
| <b>URI</b>   | <b>ID</b>   |
| This Service Interface Profile (SIP) describes the key elements that make up the NNEC Core Enterprise Services (CES) Security Services.  |   |
| <a href="#">AI_TECH_2016.06.02.01_SIP.pdf</a>  | SIP-SEC   |
| <b>REST Security Services</b>  | Service Interface Profile For REST Security Services        |
| This specification provides the profile for securing representational state transfer (REST) web services (known as RESTful web services) that are deployed within the NNEC web service infrastructure. It specifies security requirements that need to be accounted for depending on the environment in which the services are being deployed, and the level of assurance required for protecting those services. This profile covers the required security protection profile for a Client to access protected resources on a Resource Server using REST. |   |
| <a href="#">AI_TECH_2016.06.02.02_SIP.pdf</a>  | SIP-REST  |
| <b>Security Token Services</b>   | Service Interface Profile For Security Token Services       |
| The purpose of this Service Interface Profile (SIP) is to specify how the security token service component of the Core Enterprise Services (CES) Security Services may be called.  |   |
| <a href="#">AI_TECH_2016.06.02.03_SIP.pdf</a>  | SIP-TOKEN   |
| <b>Policy Enforcement Points</b>   | Service Interface Profile For Policy Enforcement Points     |
| The purpose of this Service Interface Profile (SIP), which should be read along with the Agency Directive 06.05.04.02.H 2, "Service Interface Profile for Security Services" [NCIA AD 06.05.04.02.H], is to specify how services may be called that are protected by the Core Enterprise Services (CES) Security Services.   |   |
| <a href="#">AI_TECH_2016.06.02.04_SIP.pdf</a>  | SIP-POLICY-ENFORCE  |
| <b>Enterprise Directory Services</b>   | Service Interface Profile For Enterprise Directory Services |
| The purpose of this Service Interface Profile (SIP) is to specify the interface of the directory service itself.   |   |
| <a href="#">AI_TECH_2016.06.02.05_SIP.pdf</a>  | SIP-ENTR-DIR  |
| <b>Messaging</b>   | Service Interface Profile For Messaging                     |
| This specification provides the interface control for simple object access protocol (SOAP) web services that are deployed within the NNEC web service infrastructure.  |   |
| <a href="#">AI_TECH_2016.06.02.06_SIP.pdf</a>  | SIP-MESG  |

| Service Area   | Title   |
|--|---|
| <b>Abstract</b>  |   |
| URI  | ID  |
| <b>REST Messaging</b>  | Service Interface Profile For REST Messaging  |
| This specification provides the profile for securing representational state transfer (REST) web services (known as RESTful web services) that are deployed within the NNEC web service infrastructure. This covers only the call from a Web Service Consumer to a Web Service Provider using REST, and the response from the service provider. It includes how the message must be structured and the elements that must be contained within the call. |   |
| <a href="#">AI_TECH_2016.06.02.07_SIP.pdf</a>  | SIP-REST-MSG  |
| <b>Publish-Subscribe Services</b>  | Service Interface Profile For Publish-Subscribe Services                                      |
| This document gives directives along with clarifications and amendments to the [OASIS WS-BaseNotification, 2006] and [OASIS WS-BrokeredNotification, 2006] specification on how to implement a notification broker/subscription manager to promote interoperability between the publish/subscribe engines and generic message subscribers. Some extensions to the protocol have been introduced in order to meet NATO requirements.                    |   |
| <a href="#">AI_TECH_2016.06.02.08_SIP.pdf</a>  | SIP-PUBSUB  |
| <b>Publish-Subscribe Notification Broker With Subscription Manager</b>   | Service Interface Profile For Publish-Subscribe Notification Broker With Subscription Manager |
| This document is part of a Service Interface Profile (SIP) for Publish/Subscribe Core Enterprise Services (CES) and should be read together with the main document [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification compliant notification broker. It is REQUIRED that each notification broker implementation also includes the subscription manager functionality.  |   |
| <a href="#">AI_TECH_2016.06.02.09_SIP.pdf</a>  | SIP-PUBSUB-NOTIF-BROOKER  |
| <b>Publish-Subscribe Notification Consumer</b>   | Service Interface Profile For Publish-Subscribe Notification Consumer                         |
| This document is part of a Service Interface Profile (SIP) for publish/subscribe Core Enterprise Services (CES) and should be read together with the main document "Service Interface Profile for Publish/Subscribe Services" [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification-compliant notification consumer.   |   |
| <a href="#">AI_TECH_2016.06.02.10_SIP.pdf</a>  | SIP-PUBSUB-NOTIF-CONSUMER   |
| <b>A Notification Cache Service</b>  | Service Interface Profile For A Notification Cache Service                                    |

| Service Area  | Title  |
|---|--|
| <b>Abstract</b>   |  |
| <b>URI</b>  | <b>ID</b>  |
| This Service Interface Profile (SIP) describes the key elements that make up the NNEC Core Enterprise Services (CES) Notification Cache service. It describes and profiles the operations which a Notification Cache service offers together with the associated message formats, and serves as a template and guideline for implementations.                   |  |
| <a href="#">AI_TECH_2016.06.02.11_SIP.pdf</a>   | SIP-NOTIF-CACHE  |
| <b>Basic Collaboration Services</b>   | Service Interface Profile For Basic Collaboration Services                               |
| This Collaboration Service Interface Profile (SIP) is focused on instant messaging and is based on the extensible messaging and presence protocol (XMPP).   |  |
| <a href="#">AI_TECH_2016.06.02.12_SIP.pdf</a>   | SIP-BCS  |
| <b>Core And Advanced Instant Messaging Collaboration Services</b>   | Service Interface Profile For Core And Advanced Instant Messaging Collaboration Services |
| This document specifies the Service Interface Profile (SIP) for a number of instant messaging services that can be implemented and used by any XMPP entity (XMPP Client or XMPP Server) on the XMPP network.  |  |
| <a href="#">AI_TECH_2016.06.02.13_SIP.pdf</a>   | SIP-MESG-COL-SERV  |
| <b>Geospatial Services – Geoprocessing Service</b>  | Service Interface Profile For Geospatial Services – Geoprocessing Service                |
| This document gives guidance on the implementation of a Geoprocessing Service, being a special kind of a Geospatial Service.  |  |
| <a href="#">AI_TECH.06.02.15_SIP.pdf</a>  | SIP-GEO-MRS  |
| <b>Geospatial Services – Map Rendering Service</b>  | Service Interface Profile For Geospatial Services – Map Rendering Service                |
| This document gives guidance on the implementation of a Map Rendering Service, being a special kind of a Geospatial Service.  |  |
| <a href="#">AI_TECH_2016.06.02.14_SIP.pdf</a>   | SIP-GEO-MRS  |
| <b>Recognized Air Picture Data Services</b>   | Service Interface Profile for Recognized Air Picture Data                                |
| This Service Interface Profile provides detailed information, guidance, instructions, standards and criteria to define the minimum set of data elements that are required to be available for operational or technical reasons so that correctly formatted technical message can be generated to establish a Recognized Air Picture in a federated environment. |  |

| Service Area  | Title  |
|---|--|
| <b>Abstract</b>   |  |
| <b>URI</b>  | <b>ID</b>  |
| <a href="#">FMN Spiral 3 Profile including SIP for RAPD</a>   | SIP-RECOGNIZED-AIR-PICTURE-DATA                              |
| <b>Service Management Services</b>  | Service Interface Profile for Service Management and Control |
| This Service Interface Profile provides guidance and technical details to the procedures, supporting services, infrastructure and data attributes required to implement Service Management and Control (SMC) services in Mission Networks. As such, this document contributes to the establishment of capabilities in support of Federated Mission Networking (FMN) as an affordable, effective and efficient means to enable sharing of information in a coalition environment.  |  |
| <a href="#">FMN Spiral 3 Profile including SIP for SMC</a>  | SIP-FOR-SMC  |
| <b>Transport Layer Security</b>   | Service Interface Profile for Transport Layer Security       |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used as a for the usage of Transport Layer Security (TLS) protocol to provide authentication, confidentiality and integrity services for protecting the communication between a consumer and a provider. This publication is a living document and will be periodically reviewed and updated to reflect technology developments, emerging best practices, evolving standards and new or deprecated cryptographic schemes and algorithms. |  |
| <a href="#">FMN Spiral 3 Profile including SIP for TLS</a>  | SIP-FOR-TLS  |
| <b>Web Applications</b>   | Service Interface Profile for Web Applications               |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used for development, delivery and consumption of Web applications and dynamic Web sites. This publication is a living document and will be periodically reviewed and updated to reflect technology developments and emerging best practices.  |  |
| <a href="#">FMN Spiral 3 Profile including SIP for Web Apps</a>   | SIP-FOR-WEB-APPS   |
| <b>Cryptographic Services</b>   | Cryptographic Artefact Binding Profiles                      |
| Profile the use of cryptographic protocols, which can be used to implement support for different cryptographic techniques and mechanisms, for generating cryptographic artefacts to be stored in a cryptographic binding.   |  |

| Service Area   | Title   |
|--|---|
| <b>Abstract</b>  |   |
| <b>URI</b>   | <b>ID</b>   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 2</a>   | BINDING-CRYPTO-V2   |
| <b>Informal Messaging Services</b>   | Simple Mail Transfer Protocol (SMTP) Binding Profile            |
| This profile specifies the mechanism for binding metadata to Internet Email (both formal and informal) including MIME entities.  |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 2</a>   | BINDING-SMTP-V2   |
| <b>XMPP Services</b>   | Extensible Message and Presence Protocol (XMPP) Binding Profile |
| Confidentiality metadata labels can be supported in XMPP stanzas as indicated by XEP-0258 whereby a mechanism for carrying Enhanced Security Services (ESS) Security labels is standardized. This profile extends the XEP-0258 specification to support carrying an Embedded or Detached BDO for Message stanzas. This profile supports the XMPP use cases for one-to-one instant messaging and multi-user chat.   |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 4</a>   | BINDING-XMPP-V2   |
| <b>Metadata Services</b>   | Office Open XML (OOXML) Formats Binding Profile                 |
| This profile for the OOXML describes how metadata can be maintained.   |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 5</a>   | BINDING-OOXML-V2  |
| <b>SOAP Services</b>   | Simple Object Access Protocol (SOAP) Profile                    |
| This profilesupports for both SOAP 1.1 and SOAP 1.2. To support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the SOAP protocol layer. Metadata may be bound to the whole data object (SOAP message) or may be bound to subsets of the SOAP message (data object(s) in the SOAP body). In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). |   |

| Service Area  | Title   |
|---|---|
| <b>Abstract</b>   |   |
| <b>URI</b>  | <b>ID</b>   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 6</a>  | BINDING-SOAP  |
| <b>REST Services</b>  | Representational State Transfer (REST) Profile          |
| In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). As such, there is no requirement for metadata binding that is specific for REST. However, to support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the HTTP protocol layer. |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 7</a>  | BINDING-REST-V2   |
| <b>Generic Packaging Services</b>   | Generic Open Packaging Convention (OPC) Binding Profile |
| This profile defines a generic packaging mechanism, based upon the Open Packaging Container (OPC) defined in ISO/IEC 29500-2:2008, to associate any arbitrary file that do not use the Office Open XML (OOXML) format or have no specific profile for supporting the Binding Information with their own file format.  |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 8</a>  | BINDING-GENERIC-V2                                      |
| <b>Sidecar Services</b>   | Sidecar Files Binding Profile                           |
| Sidecar files allow the association of metadata with a data object for which there is no profile.   |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 9</a>  | BINDING-SIDECAR-V2                                      |
| <b>XMP Services</b>   | Extensible Metadata Platform (XMP) Binding Profile      |
| This Binding Profile for XMP describes how metadata should be incorporated within an XMP packet as a structured value.  |   |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 10</a>   | BINDING-EXTENSIBLE-V2                                   |

| Service Area   | Title  |
|--|--|
| <b>Abstract</b>  |  |
| <b>URI</b>   | <b>ID</b>                                    |
| <b>WSMP Services</b>   | Web Service Messaging Profile (WSMP) Profile |
| The Web Service Messaging Profile (WSMP) defines a set of service profiles to exchange arbitrary XML-based messages. WSMP is extensible and may be used by any Community of Interest (COI). This profile supports the requirement to explicitly bind metadata to data (or subsets thereof) whereby the data is XML-based and exchanged between service consumers and service providers using the WSMP message wrapper mechanism. |  |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 11</a>  | BINDING-WSMP                                 |
| <b>XML Artifacts Profile</b>   | Common XML artefacts 2.0                     |
| This profile supports the requirement to bind metadata to data (or subsets thereof) whereby the data is XML-encoded in one of the following schemas: XML Schema, ISO Schematron, XML Stylesheet, Generic Codelist, Context/Value Association or Security Policy Information File.  |  |
| <a href="#">ADat-P 4778.2 Ed A Ver 1:2020 - Profiles for Binding Metadata to a Data Object - Chapter 12</a>  | BINDING-COMMON-XML                           |

## **NATO LETTER OF PROMULGATION**

The enclosed Allied Data Publication ADatP-34, Edition N, Version 2 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition N, Version 2 is effective on receipt and supersedes ADatP-34, Edition N, Version 1 which shall be destroyed in accordance with the local procedure for the destruction of documents.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Dimitrios SIGOULAKIS  
Lieutenant General, GRC (A)  
Director, NATO Standardization Office

# CHAPTER 1. STANDARDS

## 1.1. INTRODUCTION

001. The purpose of this chapter is to specify the candidate NISP standards. The document organizes these standards, following baseline 3.1 NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-D(2019)0034-AS1(INV) on 26 August 2019. A graphical representation of this taxonomy is included in volume 1.

002. For some standards it was not clear yet which service identified in the C3 Taxonomy should be used. Therefore, as an interim solution, the taxonomy was extended with e.g. user-defined "Cloud Services". In a separate section, all standards are listed for which could not yet be defined how they should be linked to the C3 Taxonomy.

003. The standards are presented in tabular form. Each table represent a subtree from the C3 taxonomy and each table line (marked in bold and spanning all columns in the table) represents a taxonomy node from the subtree. Under each taxonomy node title, all standards which are mapped to the node are listed with the following attributes: title of the standard; where possible, a link to the standard; publication number of the standard; a list of all the capability profiles where the standard is used; and finally the "responsible party" which is the domain expert that advises NATO about the standard. In general, a taxonomy node is only listed if at least one standard is assigned to this taxonomy node.

004. When STANAG X Ed Y is in ratification process, this is indicated by STANAG (RD) X Ed Y, and when it is a study draft, this is indicated by STANAG (Study) X Ed Y.

### 1.1.1. Releasability Statement

005. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

## 1.2. USER APPLICATIONS

| Title   | Pubnum             | Profiles      | Responsible Party |
|---|--------------------|---------------|-------------------|
| <b>User Applications</b>  |                    |               |                   |
| <a href="#">Multipurpose Internet Mail Extensions (MIME) Part Two: Media Types</a>    | IETF RFC 2046:1996 | FMN5-20221202 | FMN CPWG          |
| <a href="#">Uniform Resource Identifiers (URI): Generic Syntax</a>                    | IETF RFC 3986:2005 | FMN5-20221202 | FMN CPWG          |
| <a href="#">The application/json Media Type for JavaScript Object Notation (JSON)</a> | IETF RFC 4627:2006 | FMN5-20221202 | FMN CPWG          |
| <a href="#">PATCH Method for HTTP</a>   | IETF RFC 5789:2010 | FMN5-20221202 | FMN CPWG          |

| <b>Title</b>   | <b>Pubnum</b>                                      | <b>Profiles</b> | <b>Responsible Party</b> |
|--|--|-----------------|--------------------------|
| The OAuth 2.0 Authorization Framework: Bearer Token Usage          | IETF RFC 6750:2012                                 | FMN5-20221202   | NCIA                     |
| Hypertext Transfer Protocol (HTTP/1.1): Message Syntax and Routing | IETF RFC 7230:2014                                 | FMN5-20221202   | NCIA/CES                 |
| Hypertext Transfer Protocol (HTTP/1.1): Semantics and Content      | IETF RFC 7231:2014                                 | FMN5-20221202   | FMN CPWG                 |

## 1.3. TECHNICAL SERVICES

006. The "Technical Services" include those services required to enable "User Applications". They are part of the "Back-End Capabilities" while "User Applications" are part of "User-Facing Capabilities".

007. According to the C3 Taxonomy, they consist of "Community Of Interest (COI) Services", "Core Services" and "Communications Services". The complete collection of Technical Services is sometimes referred to as the "Technical Services Framework" (TSF) or "NNEC Services Framework" (NSF).

008. In addition to the "Technical Services" identified in the C3 Taxonomy, a taxonomy layer "Cloud Computing" has been added. This enables a more useful categorization of cloud-based standards (currently only included as candidate standards).

### 1.3.1. Community Of Interest (COI) Services

### **1.3.4. Extended C3 Taxonomy**

009. The following table list taxonomy nodes, which will be part of a future version of the C3 taxonomy. They are part of this document, because stakeholders have decided to using an unofficial classification scheme for a specific purpose.

## **1.4. UNASSIGNED STANDARDS**

010. The following standards have been declared candidate standards for NATO common funded systems. However, no information of how to map the standards to the C3 Taxonomy have been provided.

## CHAPTER 2. CANDIDATE PROFILES

### 2.1. INTRODUCTION

011. The NATO Interoperability Standards and Profiles include the set of Candidate Profiles listed below.

**Table 2.1. Candidate Profiles**

| Service Area  | Title   |
|---|---|
| <b>Abstract</b>   |   |
| <b>URI</b>  |   |
| <b>Federated Mission Networking</b>   | Proposed FMN Spiral 5 Profile (Baseline 100117) |
| This document provides an overview of the standards that have been used in the FMN Spiral 5 Specification and secondly, the standard profiles that have been developed to provide implementation guidance for these sets of standards in the Capability Enhancements. |   |
