NATO LETTER OF PROMULGATION

The enclosed Alied Data Publication ADatP-34, Edition M, Version 1 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition M, Version 1 is effective on receipt.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Zoltán GULYÁS Brigadier General, HUNAF Director, NATO Standardization Office

CHAPTER 1. INTRODUCTION

001. The NATO Interoperability Standards and Profiles (NISP) is developed by the NATO Consultation, Command and Control (C3) Board Interoperability Profiles Capability Team (IP CaT).

002. The NISP will be made available to the general public as ADatP-34(L) when approved by the C3 Board¹.

003. The included interoperability standards and profiles (Volume 2) are **mandatory** for use in NATO common funded Communications and Information Systems (CIS). Volume 3 contains **candidate** standards and profiles.

004. In case of conflict between any recommended non-NATO² standard and relevant NATO standard, the definition of the latter prevails.

005. In the NISP the keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" are to be interpreted as described in [IETF RFC 2119].

| RFC | Request for Change |
| SDS | Service Data Sheet |
| SIOP | Service Interoperability Point Definition is to be found in EAPC(AC/322)D (2006)0002-REV 1): SIOP is a reference point within an architecture where one or more service interfaces are physically or logically instantiated to allow systems delivering the same service using different protocols to interoperate. Note: A service interoperability point serves as the focal point for service interoperability between interconnected systems, and may be logically located at any level within the components, and its detailed technical specification is contained within a service interface profile. |
| SIP | Service Interface Profile |
| SME | Subject Matter Expert |

| Abbreviation | Full Text |
|--------------|---|
| SOA | Service Oriented Architecture |
| STANAG | NATO abbreviation for STAN dardization AG reement, which set up processes, procedures, terms, and conditions for common military or technical procedures or equipment between the member countries of the alliance. |
| TACOMS | Tactical Communication Programme |

1.1. PURPOSE OF THE NISP

006. NISP gives guidelines to capability planners, programme managers and test managers for NATO common funded systems in the short or mid-term timeframes.

007. The NISP prescribes the necessary technical standards and profiles to achieve interoperability of Communications and Information Systems in support of NATO's missions and operations. In accordance with the Alliance C3 Strategy (ref. C-M(2014)0016) all NATO Enterprise (ref. C-M(2014)0061) entities shall adhere to the NISP mandatory standards and profiles in volume 2.

008. Other activities that assure interoperability within the alliance should list their profiles in the NISP.

1.2. INTENDED AUDIENCE

009. The intended audience of the NISP are all stakeholders in the NATO Enterprise, and Allied and Partner nations involved in development, implementation, lifecycle management, and transformation to a federated environment.

010. There are specific viewpoints that are mapped to the NISP structure. NISP gives guidelines to:

- capability planners involved in NDPP and NATO led initiatives
- programme managers for building NATO common funded systems
- test managers for their respective test events (such as CWIX, CIAV, etc.)
- national planning and programme managers for their national initiatives

011. Specific NATO or national views to the NISP based on data export to external planning and management systems will be possible upon delivery of an updated version of the NISP Exchange Specification in 2019.

CHAPTER 2. BASIC CONCEPTS

012. This chapter gives an overview to understand the data in volume 2 and volume 3. NISP does not differentiate between the usage of NATO and non- NATO standards but always strives to select the most appropriate and up to date. The classification (Mandatory or Candidate) of any standard depends on its location in the NISP, Volume 2 or Volume 3, respectively.

2.1. STANDARDS

013. Standards (their content) are defined and managed in their life cycle by standardization bodies with their own timetable. A standard may have life cycle status such as emerging, mature, fading, or obsolete. Different standardization bodies may use their own lifecycle status definitions. NISP takes lifecyle status of standards into account, but does not copy them into the NISP database. For aspects of obligation status for standards in planning and programmes, see the next paragraph.

2.2. STANAG

- 014. STANAGs are managed by the NATO Standardization Office (NSO). NATO STANAGS that are promulgated shall be considered mandatory only for NATO common-funded systems. If NISP references a STANAG, the obligation status for it is only informative. The NSO maintains the obligation status in their own process of standardization.
- 015. Some older STANAGs combine the agreement and the actual specification into one single document. NISP references the specification part.
- 016. Some STANAGs and NATO Standards included in the NISP are not yet registered in the NSO database. To indicate this, in the NISP tables the publication number starts with "NATO-Expected" instead of "NATO" and in the index, they are grouped under "NATO Standardization Office (expected in the future)".
- 017. For some STANAGs, the status in the NISP deviates from the status according to the NSO. For example, the NISP contains mandatory STANAGs that are Superseded or Cancelled according to the NSO. Also the NISP contains candidate STANAGs that are already Promulgated according to the NSO. For those STANAGs, this deviation is documented in a footnote. In general IP CaT strives to explicitly mandate the latest version of a standard in Volume 2. However, in Community of Interest (COI) profiles such as FMN 3, or the Archive profile, the CoI might choose, for purely technical reasons, to keep a superseded standard for a certain time-frame in their profile.
- 018. When a STANAG is not yet Promulgated, this is identified by including "Study" or "RD" (Ratification Draft) in the publication number. In general IP CaT strives to explicitly use promulgated standards especially in Volume 2. However, in Community of Interest (COI) profiles such as FMN, or the Archive profile, the CoI might choose, for purely technical reasons,

to inject a Study or Ratification Draft of a standard in their profile. These should be limited to Volume 3.

2.3. INTEROPERABILITY PROFILES

019. Profiles define the specific use of standards at a service interoperability point (SIOP) in a given context. Profiles support prerequisites for programmes or projects and enable interoperability implementation and testing.

020. Interoperability Profiles provide combinations of standards and (sub)profiles for different CIS and identify essential profile elements including:

- Capability Requirements and other NAF architectural views
- Characteristic protocols
- Implementation options
- · Technical standards
- Service Interoperability Points, and
- The relationship with other profiles such as the system profile to which an application belongs.

021. The NISP now defines the **obligation status** of profiles and standards as "mandatory" or "candidate".

- Mandatory: The application of standards or profiles is enforced for NATO common funded systems in planning, implementing and testing. Nations are required to use the NISP for developing capabilities that support NATO's missions (ie. NATO led operations, projects, programs, contracts and other related tasks). Nations are invited to do the same nationally to promote interoperability for federated systems and services.
- Candidate: The application of a standard or profile shall only be used for the purpose of testing and programme / project planning. The standard or profile must have progressed to a stage in its life-cycle and is sufficiently mature and is expected to be approved by the standardization body in the foreseeable future. This implies, that from a planning perspective, the respective standard or profile is expected to become mandatory during execution of the programme. A candidate standard or profile should not stay in volume 3 for more than 3 years.
- 022. Profiles shall be updated if referenced standards change. Profiles are dynamic entities by nature. NATO captures this dynamic situation by updating profiles once a year in the NISP. Profile owners are responsible for the versioning of their profiles. Profile reviews are required every 2 years by their owners to ensure their accuracy and continued relevance.

- 023. Proposed profiles (and standards) can be accepted as candidates in order to follow their developments and to decide if they can be promoted to mandatory standards and profiles. In some cases proposed standards and profiles can be readily accepted directly as mandatory.
- 024. Interoperability Profiles can reference other Interoperability Profiles to allow for maximal reuse.
- 025. Further information and guidance on creation of profiles is available in Appendix A.

2.4. BASIC STANDARDS PROFILE

- 026. Within the NISP, the "Basic Standards Profile" specifies the technical, operational, and business standards that are generally applicable in the context of the Alliance and the NATO Enterprise. For a specific context, such as Federated Mission Networking, separate profiles may be defined that apply specifically to that context or related architectures. The standards that are cited may be NATO standards, or other agreed international and open standards.
- 027. As there is no overarching alliance architecture, each standard is associated with elements of the C3 Taxonomy. A distinction must be made between applicability of a standard, and conformance to the standard. If a standard is applicable to a given C3 Taxonomy element, any architecture that implements such an element need not be fully conformant with the standard. The degree of conformance may be judged based on the specific context of the project. For example, to facilitate information exchange between C2 and logistics systems it may be sufficient to implement only a subset of concepts as defined in JC3IEDM (STANAG 5525).

028. The "Basic Standards Profile" contains "agreed" as well as "candidate" standards.

2.5. CREATING RELATIONSHIPS TO OTHER CONCEPTS AND PLANNING OBJECTS WITHIN NATO

029. Different initiatives and organizations have developed new concepts to govern developments in the interoperability domain. These concepts have logical relationship to the NISP.

2.5.1. Architecture Building Block

030. An Architecture Building Block (ABB) is a constituent of the architecture model that describes a single aspect of the overall model ¹.

- 7 -

2.5.1.1. Characteristics

031. ABBs:

¹TOGAF 9.1 Specification

- Capture architecture requirements; e.g., business, data, application, and technology requirements
- Direct and guide the development of Solution Building Blocks

2.5.1.2. Specification Content

032. ABB specifications include the following as a minimum:

- Fundamental functionality and attributes: semantic, unambiguous, including security capability and manageability
- Interfaces: chosen set, supplied
- Interoperability and relationship with other building blocks
- Dependent building blocks with required functionality and named user interfaces
- Map to business/organizational entities and policies

2.5.2. FMN Spiral Specifications

033. Federated Mission Networking (FMN) Spiral² Specifications encompass "an evolutionary cycle that will raise the level of maturity of federated mission networking capabilities over time".

034. The FMN spiral specification contain the following sections

- architecture
- instructions
- · profiles, and
- requirements specifications.

The Mandatory and Candidate FMN Spiral Profiles, in context for FMN Affiliates, are listed in the NISP Volumes 2 and 3.

2.5.3. Capability Packages

035. Profiles will be referenced in the NISP for specified NATO Common Funded Systems or Capability Packages and may include descriptions of interfaces to National Systems where appropriate.

²Annex B TO Volume I - Implementation Overview, NATO FMN Implementation Plan v4.0 dated: 23 September 2014, Terms and Definitions

revision: v12.2-84-g22e8f86

2.6. CRITERIA FOR SELECTING STANDARDS

036. Any standard(s) listed in Volume 2 of the NISP shall:

- Be already approved by a NATO Standardization Tasking Authority or another non- NATO standards development organization (e.g. ISO, ANSI, ETSI, IEEE, IETF, W3C);
- Have an assigned responsible party within NATO that can provide relevant subject matter expertise;
- Be available in one of the NATO official languages;
- Support C3 Interoperability (including. people, processes and technology) and related NATO common funded Communication and Information Systems (CIS), including their development and operations;
- Enable the NATO Enterprise, NATO Nations and Partner Nations to develop interoperable C3 capabilities that support NATO's missions (i.e. NATO led operations, projects, programs, contracts and other related tasks).
- Any standard deviating from the criteria listed in the paragraph 4.1., can be recommended by the IP CaT for inclusion in the NISP and can be implemented after the approval of the C3B.

2.7. CRITERIA FOR SELECTING NON-NATO STANDARDS

037. Any Non-NATO standard(s) listed in Volume 2 of NISP should:

- Have implementations from a cross-section of vendors available;
- Be utilized by the broader user community;
- Be developed in a consensus-based way;
- Be free from any legal issues (i.e. intellectual property rights);
- Meet NATO requirements;
- Be easily accessible to vendors;
- Have an open architecture, e.g. extensible for new technological developments,
- Be compatible with other NATO-agreed standards;
- Be stable (mostly recognized by related community/industry) and mature enough in terms of technology;
- Be measurable in terms of its compliance.

CHAPTER 3. ORGANIZATION OF THE NISP INFORMATION

038. This chapter gives an overview of the new structure of all three volumes.

3.1. NISP STRUCTURE

039. The structure of the NISP is organized to list and categorize the standards and profiles according to their usage in NATO. It contains three volumes:

- **Volume 1** Introduction: This volume introduces basic concepts, provides the management framework for the configuration control of the NISP and the process for handling Request for Change (RFC). It includes also guidance on development of interoperability profiles.
- Volume 2 Agreed Interoperability Standards and Profiles: This volume lists agreed interoperability standards and profiles, mandatory for NATO common funded systems. These should support NATO and National systems today and new systems actually under procurement or specification.
- Volume 3 Candidate Interoperability Standards and Profiles: This Volume lists informative references to Standards and Interoperability Profiles, such as drafts of NATO specifications, that may be used as guidance for future programmes.

040. Volume 2 is normative for NATO common funded systems and Volume 3 is informative.

revision: v12.2-84-g22e8f86

CHAPTER 4. INTEROPERABILITY IN SUPPORT OF CAPABILITY PLANNING

041. The following documents form the foundation to understand the embedding of NISP into NDPP and architecture work:

Table 4.1. NDPP References

| Document | Document Reference |
|---|------------------------------------|
| Alliance C3 Strategy Information and Communication Technology to prepare NATO 2020 (20 July 2018) | Alliance C3 Strategy C-M(2019)0037 |
| Alliance C3 Policy (25 April 2016) | C-M(2015)0041-REV1 |
| NATO Defence Planning Process (NDPP) | PO(2016)0655 (INV) |

042. The NATO Defence Planning Process (NDPP) is the primary means to identify the required capabilities and promote their timely and coherent development and acquisition by Allies and Partners. It is operationally driven and delivers various products which could support the development and evolution of more detailed C3 architecture and interoperability requirements. The development of NDPP products also benefits from input by the architecture and interoperability communities, especially the NISP, leading to a more coherent development of CIS capabilities for the Alliance.

043. The work on Enterprise, Capability, and programme level architecture will benefit from the NISP by selecting coherent sets of standards for profiles.

044. More information on how the NISP supports the NDPP can be found in Annex B.

CHAPTER 5. CONFIGURATION MANAGEMENT

045. The NISP is updated once a year to account for the evolution of standards and profiles.

046. Request for Change (RFC) to the NISP will be processed by the IP CaT, following the process in the graphic below:

Figure 5.1. RFC Handling Process

047. The RFC contains all information required for the NISP management by IP CaT; The detailed information about standard or profile is handed over as attachments to this form. A notional RFC form with example information is presented below:

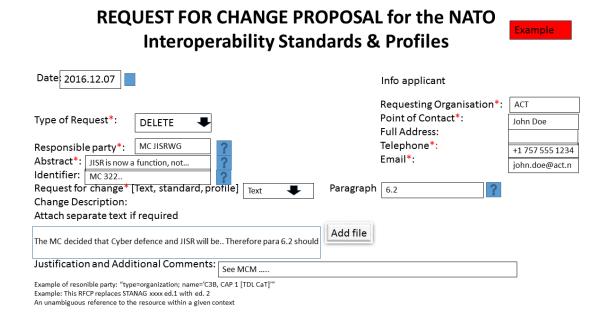

Figure 5.2. RFC Notional Form

- 048. The primary point of contact for RFC submission is the IP CaT. RFCs may be submitted to the IP CaT via the Change web site or via email to herve.radiguet@act.nato.int with attachments.
- 049. Review of RFCs will be coordinated with the responsible C3 Board substructure organizations where appropriate.
- 050. The IP CaT reviews the submissions in dialog with national and international bodies. Based on that review, the RFC will be formally processed into the next version of the NISP; or returned to the originator for further details; or rejected. The IP CaT will attempt to address all RFCs submitted by 1 September into the next NISP release. RFCs submitted after this date may be considered for inclusion at the discretion of the IP CaT, or will be processed for the following NISP release.

5.1. NISP UPDATE PROCESS

- 051. The new NISP version is submitted to the C3 Board by end of the year after internal review by the IP CaT. The version under review is a snapshot in time of the status of standards and profiles.
- 052. The database of standards and profiles maintained by the IP CaT is the definitive source of the current status of standards and profiles.

053. A standard listed in Volume 2 of the NISP shall:

- 1. be approved already by a NATO Standardization Tasking Authority or another non-NATO standards development organization (e.g. ISO, ANSI, ETSI, IEEE, IETF, W3C),
- 2. have an assigned responsible party that can provide relevant subject matter expertise,
- 3. be available in one of the NATO official languages,
- 4. support C3 Interoperability (incl. people, processes and technology) and related NATO common funded Communication and Information Systems (CIS) including their development and operations, and
- 5. enable the NATO Enterprise, NATO Nations and partner nations to develop interoperable capabilities that support NATO's missions (ie. NATO led operations, projects, programs, contracts and other related tasks).
- 054. Deviations from the rules listed above can be recommended by the IP CaT and approved by the C3B.
- 055. Some key criteria for inclusion of non-NATO standards into Volume 2 are
- Availability of implementations from a cross-section of vendors;
- Usage of implementations by user community;
- Compatibility with other standards;
- Completeness. Does the standard meet the functional requirements?
- Extensibility. Can the standard easily add new technologies when they become available?;
- Stability/maturity. Is the standard based on well understood technology, and has it matured enough to ensure no major changes will occur through further refinements?
- Non-discriminatory. Was the standard developed in a consensus-based way?
- Testability. Conformance metrics. Can the standard be tested to prove compliance?
- Legitimacy. Freedom from legal issues.

5.2. NISP PRODUCTS

056. The NISP is published in several formats:

- Documentation in HTML and PDF Formats
- Website and searchable online Database

• Data export in XML format

revision: v12.2-84-g22e8f86

CHAPTER 6. NATIONAL SYSTEMS INTEROPERABILITY COORDINATION

057. Coordination of standards and profiles between Nations and NATO are critical for interoperability. As a result of the C3 Board substructure reorganization, participants in IP CaT are subject matter experts (SME) and are no longer national representatives. SME's should therefore coordinate with national and C3 Board representatives to ensure national perspectives are presented to IP CaT. As such, each of the IP CaT SMEs is responsible for:

- Appropriate and timely coordination of standards and profiles with respect to interoperability with national systems;
- Coordination of the SME input including coordination with national SMEs of other C3 Board substructure groups; and
- Providing appropriate technical information and insight based on national market assessment.

058. National level coordination of interoperability technical standards and profiles is the responsibility of the C3 Board. When the latest version of NISP is approved by the C3 Board, it will become the NATO Standard covered by STANAG 5524 Edition 2. This STANAG contains the agreement of the participating nations regarding usage of the mandatory standards and profiles in the NISP.

CHAPTER 7. INTEROPERABILITY STANDARDS GUIDANCE

059. The NISP references Standards from different standardization bodies¹. In the case of a ratified STANAG, NATO standardization procedures apply. The NISP only references these STANAG's without displaying the country-specific reservations. The country-specific reservations can be found in the NATO Standardization Office's NATO Standardization Document Database.

060. The Combined Communications Electronics Board (CCEB) nations will use NISP Volume 2 to publish the interoperability standards for the CCEB under the provisions of the NATO-CCEB List of Understandings (LoU)².

061. The NISP organizes the standards using the structure of the latest approved baseline of NATO's C3 Taxonomy. A graphical representation of this taxonomy is given in the following figure and a description of it can be obtained at: https://tide.act.nato.int/tidepedia/index.php/C3_Taxonomy. Currently, the standards only address a subset of the services in the taxonomy, mainly services in the group Technical Services. For some standards it is indicated that an appropriate mapping to the C3 Taxonomy could not yet be made.

¹In case of conflict between any recommended non-NATO standard and relevant NATO standard, the definition of the latter prevails.

²References: NATO Letter AC/322(SC/5)L/144 of 18 October 2000, CCEB Letter D/CCEB/WS/1/16 of 9 November 2000, NATO Letter AC/322(SC/5)L/157 of 13 February 2001

Figure 7.1. C3 Taxonomy

062. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

revision: v12.2-84-g22e8f86

063. However, a subset of documents may only be available for those nations or organizations, which are joining a specific mission or are members of a special working group. The membership in these activities is outside the scope of NISP.

revision: v12.2-84-g22e8f86

CHAPTER 8. APPLICABILITY

064. The mandatory standards and profiles documented in Volume 2 will be used in the implementation of NATO Common Funded Systems. Participating nations agree to use the mandatory standards and profiles included in the NISP at the Service Interoperability Points and to use Service Interface Profiles among NATO and Nations to support the exchange of information and the use of information services in the NATO realm.

APPENDIX A. PROFILE GUIDANCE

A.1. PROFILE CONCEPTUAL BACKGROUND

065. ISO/IEC TR 10000 [2] defines the concept of profiles as a set of one or more base standards and/or International Standardized Profiles, and, where applicable, the identification of chosen classes, conforming subsets, options and parameters of those base standards, or International Standardized Profiles necessary to accomplish a particular function.

066. The C3 Board (C3B) Interoperability Profiles Capability Team (IP CaT) has extended the profile concept to encompass references to NAF architectural views [1], characteristic protocols, implementation options, technical standards, Service Interoperability Points (SIOP), and related profiles.

067. Nothing in this guidance precludes the referencing of National profiles or profiles developed by non-NATO organizations in the NATO Interoperability Standards and Profiles (NISP).

A.2. PURPOSE OF INTEROPERABILITY PROFILES

068. Interoperability Profiles aggregate references to the characteristics of other profiles types to provide a consolidated perspective.

069. Interoperability Profiles identify essential profile elements including Capability Requirements and other NAF architectural views [1], characteristic protocols, implementation options, technical standards, Service Interoperability Points, and the relationship with other profiles such as the system profile to which an application belongs.

070. NATO and Nations use profiles to ensure that all organizations will architect, invest, and implement capabilities in a coordinated way that will ensure interoperability for NATO and the Nations. Interoperability Profiles will provide context and assist or guide information technologists with an approach for building interoperable systems and services to meet required capabilities.

A.3. APPLICABILITY

071. NISP stakeholders include engineers, designers, technical project managers, procurement staff, architects and other planners. Architectures, which identify the components of system operation, are most applicable during the development and test and evaluation phase of a project. The NISP is particularly applicable to a federated environment, where interoperability of mature National systems requires an agile approach to architectures.

072. The IP CaT has undertaken the development of interoperability profiles in order to meet the need for specific guidance at interoperability points between NATO and Nations systems

and services required for specific capabilities. As a component of the NISP, profiles have great utility in providing context and interoperability specifications for using mature and evolving systems during exercises, pre-deployment or operations. Application of these profiles also provides benefit to Nations and promotes maximum opportunities for interoperability with NATO common funded systems as well as national to national systems. Profiles for system or service development and operational use within a mission area enable Nations enhanced readiness and availability in support of NATO operations.

A.4. GUIDELINES FOR INTEROPERABILITY PROFILE DEVELOPMENT

073. Due to the dynamic nature of NATO operations, the complex Command and Control structure, and the diversity of Nations and Communities of Interest (COI), interoperability must be anchored at critical points where information and data exchange between entities exists. The key drivers for defining a baseline set of interoperability profiles include:

- Identify the Service Interoperability Points and define the Service Interface Profiles
- Develop modular Architecture Building Blocks
- Use standards consistent with common architectures
- Develop specifications that are service oriented and independent of the technology implemented in National systems where practical
- Develop modular profiles that are reusable in future missions or capability areas
- Use an open system approach to embrace emerging technologies

074. The starting point for development of a profile is to clearly define the Service Interoperability Point where two entities will interface and the standards in use by the relevant systems.

075. The NISP is the governing authoritative reference for NATO interoperability profiles. Doctrine, Organization, Training, Materiel, Leadership and education, Personnel, Facilities and Interoperability (DOTMLPFI) capability analysis may result in a profile developer determining that some of the capability elements may not be relevant for a particular profile. In such cases, the "not applicable" sections may either be marked "not applicable" or omitted at the author's discretion.

A.5. STRUCTURE OF INTEROPERABILITY PROFILE DOCUMENTATION

076. This section identifies typical elements of Interoperability Profile Documentation.

revision: v12.2-84-g22e8f86

A.5.1. Identification

077. Each NATO or candidate NATO Interoperability Profile **shall** have a unique identifier assigned to it when accepted for inclusion in the NISP. This **shall** be an alpha-numeric string appended to the root mnemonic from the NISP profile taxonomy.

A.5.2. Profile Elements

078. Profile elements provide a coherent set of descriptive inter-related information to NATO, national, Non-Governmental Organization (NGO), commercial and other entities ('actors') desiring to establish interoperability.

079. Profiles are not concepts, policies, requirements, architectures, patterns, design rules, or standards. Profiles provide context for a specific set of conditions related to the aforementioned documents in order to provide guidance on development of systems, services, or even applications that must consider all of these capability related products. Interoperability Profiles provide the contextual relationship for the correlation of these products in order to ensure interoperability is 'built-in' rather than considered as an 'after-thought'.

A.5.2.1. Applicable Standards

080. Each profile **should** document the standards required to support this or other associated profiles and any implementation specific options. The intention of this section is to provide an archive that shows the linkage between evolving sets of standards and specific profile revisions.

| ID | Purpose/Service | Standards | Guidance |
|-----------------------------|---|---|--|
| A unique profile identifier | A description of the purpose or service | A set of relevant Standard Identifier from the NISP | Implementation specific guidance associated with this profile (may be a reference to a separate annex or document) |

Table A.1. Applicable Standards

A.5.2.2. Related Profiles

081. Each profile should document other key related system or service profiles in a cross reference table. The intention of this section is to promote smart configuration management by including elements from other profiles rather than duplicating them in part or in whole within this profile. Related profiles would likely be referenced in another section of the profile.

Table A.2. Related Profiles

| Profile ID | Profile Description | Community of Interest | Associated SIOPs |
|-----------------------------|------------------------------------|---|-------------------------|
| A unique profile identifier | A short description of the profile | Air, Land, Maritime, Special Ops, etc. | Unique SIOP identifiers |

A.6. VERIFICATION AND CONFORMANCE

082. Each profile **should** identify authoritative measures to determine verification and conformance with agreed quality assurance, Key Performance Indicators (KPIs), and Quality of Service standards such that actors are satisfied they achieve adequate performance. All performance requirements must be quantifiable and measurable; each requirement must include a performance (what), a metric (how measured), and a criterion (minimum acceptable value).

083. Stakeholders are invited to provide feedback to improve a profile's verification and conformance criteria.

084. Verification and Conformance is considered in terms of the following five aspects:

- 1. Approach to Validating Service Interoperability Points
- 2. Relevant Maturity Level Criteria
- 3. Key Performance Indicators (KPIs)
- 4. Experimentation
- 5. Demonstration

A.6.1. Approach to Validating Service Interoperability Points

085. Each profile should describe the validation approach used to demonstrate the supporting service interoperability points. The intention of this section is to describe a high-level approach or methodology by which stakeholders may validate interoperability across the SIOP(s).

A.6.2. Relevant Maturity Level Criteria

086. Each profile should describe the Maturity criteria applicable to the profile. The intention of this section is to describe how this profile supports the achievement of improved interoperability.

A.6.3. Key Performance Indicators (KPIs)

087. Each profile should describe the associated Key Performance Indicators (KPIs) to establish a baseline set of critical core capability components required to achieve the enhanced

revision: v12.2-84-g22e8f86

interoperability supported by this profile. The intention of this section is to assist all stakeholders and authorities to focus on the most critical performance-related items throughout the capability development process.

Table A.3. Key Performance Indicators (KPIs)¹

| Key Performance Indicators (KPI) | Description |
|---|-------------|
| KPI #1: Single (named) Architecture | |
| KPI #2: Shared Situational Awareness | |
| KPI #3: Enhanced C2 | |
| KPI #4: Information Assurance | |
| KPI #5: Interoperability | |
| KPI #6: Quality of Service | |
| KPI #7: TBD | |

¹'notional' KPIs shown in the table are for illustrative purposes only.

A.6.4. Experimentation

088. Each profile should document experimentation venues and schedules that will be used to determine conformance. The intention of this section is to describe how experimentation will be used to validate conformance.

A.6.5. Demonstration

089. Each profile should document demonstration venues and schedules that demonstrate conformance. The intention of this section is to describe how demonstration will be used to validate conformance.

A.7. CONFIGURATION MANAGEMENT AND GOVERNANCE

A.7.1. Configuration Management

090. Each profile **shall** identify the current approach or approaches toward configuration management (CM) of core documentation used to specify interoperability at the Service Interoperability Point. The intention of this section is to provide a short description of how often documents associated with this profile may be expected to change, and related governance measures that are in place to monitor such changes [e.g., the IP CaT].

A.7.2. Governance

091. Each profile **shall** identify **one or more authorities** to provide feedback and when necessary, Request for Change (RFC) for the Profile in order to ensure inclusion of the most

up-to-date details in the NISP. The intention of this section is to provide a clear standardized methodology by which stakeholders may submit recommended changes to this profile.

APPENDIX B. INTEROPERABILITY IN THE CONTEXT OF NATO DEFENCE PLANNING

B.1. NATO DEFENCE PLANNING

092. The NATO Defence Planning Process (NDPP) is the primary means to identify required capabilities and promote their timely, coherent development and acquisition by Allies and the NATO Enterprise. It is operationally driven and delivers various products which could support the development and evolution of more detailed C3 architecture and interoperability requirements. The development of NDPP products also benefits from input by the architecture and interoperability communities, especially the NISP, leading to a more coherent development of CIS capabilities for the Alliance.

093. Ideally technical interoperability requirements align with the NDPP to ensure coherence in the development of capabilities within the Alliance. NDPP Mission Types and Planning Situations provide the essential foundation for the development of the Minimum Capability Requirements (MCR) and the derivation of high level information exchange and interoperability requirements. MCRs are expressed via a common set of definitions for capabilities (including CIS) called Capability Codes and Statements (CC&S), including explicit reference to STANAGs in some cases¹. Interoperability aspects are primarily captured in free text form within the Capability Statements and in the subsequent NDPP Targets². The NDPP products could be leveraged by the architecture and interoperability community, to define the operational context for required Architecture Building Blocks and interoperability profiles.

094. The Defence Planning Capability Survey (DPCS) is the tool to collect information on national capabilities, the architecture and interoperability communities should provide input on questions related to C3 related capabilities. The architecture and interoperability communities could also bring valuable insight and expertise to the formulation and tailoring of C3 capabilities-related targets to nations, groups of nations or the NATO enterprise.

095. In practice, there is not always an opportunity (time or money) for such a "clean" approach and compromises must be made - from requirements identification to implementation. In recognition of this fact, NATO has developed a parallel track approach, which allows some degree of freedom in the systems development. Although variations in sequence and speed of the different steps are possible, some elements need to be present. Architecture, including the selection of appropriate standards and technologies, is a mandatory step.

096. In a top-down execution of the systems development approach, architecture will provide guidance and overview to the required functionality and the solution patterns, based on longstanding and visionary operational requirements. In a bottom-up execution of the approach, which may be required when addressing urgent requirements and operational imperatives,

¹Bi-SC Agreed Capability Codes and Capability Statements, 26 January 2016 and SHAPE/PLANS/JCAP/FCP/16-311533 5000/FPR-0460/TTE-151451/Ser:NU0083

²C-M(2017)0021, NATO Capability Targets, 26 June 2017

architecture will be used to assess and validate chosen solution in order to align with the longer term vision.

097. The NISP is a major tool supporting NATO architecture work and must be suitable for use in the different variations of the systems development approach. The NISP will be aligned with the Architectural efforts of the C3 Board led by the ACaT.

098. The relationship of the NISP, the Architecture Building Blocks activities of the ACaT, and Allied Command Transformation Architecture efforts is of a mutual and reciprocal nature. Architecture products provide inputs to the NISP by identifying the technology areas that in the future will require standards. These architecture products also provide guidance on the coherence of standards by indicating in which timeframe certain standards and profiles are required. NATO Architectures benefit from the NISP by selecting coherent sets of standards from profiles.

APPENDIX C. CHANGES FROM NISP VERSION 12 (L) TO NISP VERSION 13 (M)

099. Major content changes to NISP v13 include:

- FMN Spiral 4 Profile added as Candidate (Vol 3)
- ??? RFCs processed. Details of the RFC changes are captured in Appendix E.

APPENDIX D. DETAILED CHANGES FROM NISP VERSION 12 (L) TO NISP VERSION 13 (M)

D.1. NEW STANDARDS

D.1.1. C3B

• NATO Architecture Framework (C3B ac322-n2018-0002:2018)

D.1.2. CCEB

• Instructions for the Preparation of ACPs (CCEB ACP 198(O))

D.1.3. DMG

• Predictive Model Markup Language (PPML) (DMG ppml-4.2.1:2015)

D.1.4. DMTF

• Open Virtualization Format Specification, v.1.1 (DMTF DSP0243 1.1:2013)

D.1.5. IDEF

- Function Modeling Method (IDEF IDEF0:1993)
- Data Modelling Method (IDEF IDEF1X:1993)

D.1.6. IETF

- The Text/Plain Format and DelSp Parameters (IETF RFC 3676:2004)
- URI Fragment Identifiers for the text/plain Media Type (IETF RFC 5147:2008)
- XML Media Types (IETF RFC 7303:2014)
- Path MTU Discovery (IETF RFC 1191:1990)
- Address Allocation for Private Internets (IETF RFC 1918:1996)

D.1.7. ISO/IEC

- Technical Corrigendum 1 to International Standard ISO/IEC 12087-5:1998 (ISO/IEC 12087-5-cor1:2001)
- Technical Corrigendum 2 to International Standard ISO/IEC 12087-5:1998 (ISO/IEC 12087-5-cor2:2002)

D.1.8. ISO/IEC/IEEE

• Enterprise, systems and software - Architecture Evaluation (ISO/IEC/IEEE FDIS 42030:2017)

D.1.9. MIP

- MIP Information Model 5.0 (MIP MIM 5.0:2019)
- MIP 4.2 Information Exchange Specification (MIP MIP Ver 4.2:2018)

D.1.10. NATO

- Implementation Options and Guidance for integrating IFF Mk XIIA Mode 5 on Military Platforms (IOG) AETP-11Bv1 (NATO STANREG 5635 Ed 1:2017)
- Technical Characteristics of Reverse IFF using Mode 5 Waveform AEtP-4722 Edition A (NATO STANAG 4722 Ed 1)
- Identification Data Combining Process AIDPP-01 ed. A version 1 (NATO STANAG 4162 Ed 3)
- NATO Military Oceanographic and Rapid Environmental Assessment Support Procedures (NATO ATP 32 Ed E Ver 2:2016)
- Joint Brevity Words (NATO APP-07 Ed F Ver 2:2015)
- NATO Joint Military Symbology (NATO APP-06 Ed D Ver 1:2011)
- Warning and Reporting and Hazard Prediction of Chemical, Biological, Radiological and Nuclear Incidents (Operators Manual) (NATO ATP-45 Ed E Ver 1:2014)
- Captured Persons, Materiel And Documents (NATO AJP-2.5 Ed A:2007)
- Geodetic Datums, Projections, Grids and Grid References (NATO AGeoP-21 Ed A Ver 1:2016)
- Allied Joint Medical Doctrine For Medical Evacuation (NATO AJMedP-2 Ed A Ver 1:2018)
- NATO Specifications for Global Area Reference System (GARS), Edition A Version 1
 Oct 2012:GEODETIC DATUMS, PROJECTIONS, GRIDS AND GRID REFERENCES
 GEOREF, MGRS (NATO AGeoP-07 Ed A Ver 1:2012)
- NATO Geospatial Metadata Profile AGeoP-8 Edition B (NATO STANAG 2586 Ed 2:2019)
- NATO Geospatial Metadata Profile (NATO AGeoP-08 Ed B Ver 1:2019)
- NATO Geospatial Information Framework AGeoP-11(B) Ver. 1 (NATO STANAG 2592 Ed 2:2018)
- NATO Geospatial Information Framework (NATO AGeoP-11 Ed B Ver 1:2018)
- NATO Land Urgent Voice Messages (LUVM) Pocket Book (NATO ATP-97 Ed A Ver 1:2016)
- Technical standards for single channel UHF radio equipment (NATO AComP-4205 Ed A Ver 1:2018)
- Standard for optical connector medium-rate and high-rate military tactical link (NATO AComP-4290 Ed A Ver 2:2018)
- NATO Standard Bar Code Symbologies (NATO APP-44 Ed A:2010)
- Characteristics of a Robust, Non-Hopping Serial Tone Modulator/Demodulator For Severely Degraded HF Radio Links (NATO AComP-4415 Ed A Ver 1:2015)
- Super High Frequency (SHF) Military Satellite Communications (MILSATCOM) Frequency Division Multiple Access (FDMA) Non-EPM Modem for Services Conforming to Class-B Of STANAG 4484 (NATO AComP-4486 Ed A Ver 1:2016)
- NATO Secondary Imagery Format (NSIF) (NATO AEDP-04 Ed A Ver 1:2013)

- Standard on warship Electronic Chart Display and Information Systems (WECDIS) (NATO ANP-4564 Ed A Ver 1:2017)
- NATO Advanced Data Storage Interface (NADSI) (NATO AEDP-06 Ed B Ver 3:2014)
- Super High Frequency (SHF) Military Satellite Communications (Milsatcom) EPM Waveform For Class B Services (NATO AComP-4606 Ed A Ver 1)
- NATO Ground Moving Target Indicator(GMTI) Format (NATO AEDP-07 Ed 2 Ver 1:2010)
- US Motion Imagery Standards Board (MISB) Motion Imagimary Standards Profile-2015.1 (NATO NNSTD MISP-2015.1:2016)
- NATO Intelligence, Surveillance And Reconnaissance Tracking Standard (NATO AEDP-12 Ed A Ver 1:2014)
- Multi-hop IP Networking with legacy UHF Radios: Mobile ad hoc relay Line of Sight Networking (MARLIN) (NATO AComP-4691 Ed A Ver 1:2016)
- Interoperability Point Quality of Service (IP QoS) (NATO AComP-4711 Ed A Ver 1:2018)
- Biometrics Data, Interchange, Watchlisting and Reporting (NATO AEDP-15 Ed A Ver 1:2013)
- NATO standardization of measurement and signature intelligence (MASINT) Reporting (NATO AEDP-16)
- VLF / LF MSK Multi Channel Broadcast (NATO AComP-4724 Ed A Ver 1:2015)
- Networking Framework for All-IP Transport Services (NETIP) (NATO AComP-4731 Ed A Ver 1:2017)
- NATO Vector Graphics Specification 2.0.2 (NATO ADatP-4733 Ed A Ver 1:2017)
- Confidentiality Metadata Label Syntax (NATO ADatP-4774 Ed A Ver 1:2017)
- Metadata Binding (NATO ADatP-4778 Ed A Ver 1:2018)
- Standard for Interconnection of IPv4 and IPv6 Networks at Mission Secret and Unclassified Security Levels (NATO AComP-5067 Ed A Ver 1)
- Secure Communications Interoperability Protocol (SCIP) (NATO AComP-5068 Ed A Ver 2:2017)
- NATO Message Text Formatting System (FORMETS) Concept of Formets (CONFORMETS) (NATO ADatP-03 Ver 4:2010)
- Concept of NATO Message Text Formatting System (CONFORMETS) (NATO ADatP-03 Ed A Ver 1:2010)
- Concept of NATO Message Text Formatting System (CONFORMETS) ADatP-3 (NATO STANAG 5500 Ed 8:2019)
- Concept of NATO Message Text Formatting System (CONFORMETS) (NATO ADatP-03 Ed A Ver 3:2019)
- Tactical Data Exchange Link 1 (Point-to-Point) (NATO ATDLP-5.01 Ed A Ver 1:2015)
- Tactical Data Exchange Link 11/11B (NATO ATDLP-5.11 Ed B Ver 1)
- Tactical Data Exchange Link 16 (NATO ATDLP-5.16 Ed B Ver 1)
- Standard for Joint Range Extension Application Protocol (JREAP) (NATO ATDLP-5.18 Ed A Ver 1:2015)
- Joint Range Extension Application Protocol (JREAP) (NATO ATDLP-5.18 Ed B Ver 1:2016)
- Joint Range Extension Application Protocol (JREAP) (NATO ATDLP-5.18 Ed B Ver 2:2019)

- LAND C2 Information Exchange data Model (NATO ADatP-32:2005)
- Services to forward Friendly Force Information to Weapon Delivery Assets (NATO ADatP-37 Ed A ver 1:2018)
- NATO Qualification Levels for Tactical Data Link Personnel (NATO ATDLP-5.55 Ed A Ver 1:2017)
- Standards for Interface of Data Links 1, 11, and 11B Through a Buffer (NATO ATDLP-6.01 Ed A Ver 1:2016)
- Standard Interface for Multiple Platform Link Evaluation (SIMPLE) (NATO ATDLP-6.02 Ed A Ver 1:2014)
- NATO Meteorological Codes Manual (NATO AWP-4 Ed B:2005)
- Air Reconnaissance Primary Imagery Data Standard (NATO AEDP-09 Ed 1:2009)
- Imagery Air Reconnaissance Tape Recorder Interface (NATO AEDP-11 Ed 1:2001)
- Interoperable Data Links for Imaging Systems (NATO AEDP-7085 Ed A Ver 1:2011)
- NATO Message Catalogue (NATO APP-11 Ed D:2015)
- Additional Military Layers (AML) Digital Geospatial Data Products (NATO AGeoP-19 Ed A Ver 1:2015)
- NATO Imagery Interpretability Rating Scale (NIIRS) (NATO AIntP-07 Ed A Ver 1:2018)
- Web Service Messaging Profile (WSMP) (NATO ADatP-5644 (Study) Ed A Ver 1)
- Specifications Defining The Joint Dismounted Soldier System Interoperability Network (JDSSIN) Security (NATO AEP-76 Vol1 Ed A Ver 2:2017)
- Specifications Defining the Joint Dismounted Soldier System Interoperability Network (JDSSIN) Data Model (NATO AEP-76 Vol2 Ed A Ver 2:2017)
- Specifications Defining the Joint Dismounted Soldier System Interoperability Network (JDSSIN) Information Exchange Mechanism (NATO AEP-76 Vol4 Ed A Ver 2:2017)
- Specifications Defining the Joint Dismounted Soldier System Interoperability Network (JDSSIN) Network Access (NATO AEP-76 Vol5 Ed A Ver 2:2017)
- NATO SECONDARY IMAGERY FORMAT (NSIF) STANAG 4545 IMPLEMENTATION GUIDE (NATO AEDP-04 Ed 2 Ver 1:2013)
- NATO STANDARD ISR LIBRARY INTERFACE (NATO AEDP-17 Ed A Ver 1:2018)
- NATO STANDARD ISR WORKFLOW ARCHITECTURE (NATO AEDP-19 Ed A Ver 1:2018)
- NATO Motion Imagery STANAG 4609 Implementation Guide (NATO AEDP-08 Ed 3 Ver 1:2009)
- NATO Core Metadata Specification ADatP-39 Edition A (NATO STANAG 5636 (Study) Ed 1)
- NATO Core Metadata Specification (NATO ADatP-39 (Study) Ed. A Ver. 1)

D.1.11. NATO-Expected

- Tactical Data Exchange Link 11/11B (NATO-Expected ATDLP-5.11 Ed A Ver 1)
- Standards for Data Forwarding between Tactical Data Systems Link 16 (NATO-Expected ATDLP-5.16 Ed. A Ver. 1)
- Geospatial Web Services (NATO-Expected STANAG 6523 Ed 1 (RD))
- Geospatial Web Services (NATO-Expected AGeoP-26 Ed A Ver 1)

- NATO Message Catalogue (NATO-Expected APP-11 Ed D:2017)
- NATO Message Catalogue (NATO-Expected APP-11 Ed E)

D.1.12. NCIA

• Profiles for Binding Metadata to a Data Object (NCIA TN-1491 Edition 2:2017)

D.1.13. OASIS

- Trusted Automated eXchange of Intelligence Information (OASIS TAXII Version 2.0:2017)
- STIX Core Concepts (OASIS STIX Version 2.0 Part 1:2017)
- STIX Core Concepts (OASIS STIX Version 2.0 Part 2:2017)
- Cyber Observable Core Concepts (OASIS STIX Version 2.0 Part 3:2017)
- Cyber Observable Objects (OASIS STIX Version 2.0 Part 4:2017)
- STIX Patterning (OASIS STIX Version 2.0 Part 5:2017)

D.1.14. OGC

- OpenGIS Symbology Encoding Implementation Specification (OGC 05-077r4:2007)
- GML application schema for the Simple and GML serializations of GeoRSS (OGC 1.1:2006)
- GeoRSS Geography Markup Language (OGC)

D.1.15. OMG

- OMG Systems Modeling Language (OMG SysML) (OMG formal-17-05-01:2017)
- Unified Modeling Language (OMG formal/2017-12-01:2017)
- Unified Architecture Framework (OMG formal/2017-10-01:2017)

D.1.16. Open Group

• ArchiMate 3.1 Specification (Open Group c197:2019)

D.1.17. Opensearch

• OpenSearch 1.1 Draft 6 (Opensearch opensearch 11d6)

D.1.18. SEI

• ATAM: Method for Architecture Evaluation (SEI cmu-sei-2000-tr-004:2000)

D.1.19. TM-FORUM

- TMForum Event Management API R17.5 (TM-FORUM AP817:2017)
- TMForum Resource Inventory Management API REST Specification R17.0.1 (TM-FORUM TMF639:2017)

D.1.20. TMA

• Cross.Industry Standard Process for Data Mining (TMA crisp-dm-1.0:2000)

D.1.21. US DoD

• Over-The-Horizon Targeting Gold baseline 2007 (US DoD OTH-T Gold Baseline 2007:2007)

D.2. DELETED STANDARDS

D.2.1. CCEB

- Call Sign Book for Ships (CCEB ACP 113(AD))
- Mobile Tactical Wide Area Networking (MTWAN) Technical Instructions (CCEB ACP 200 V2(C))
- Multinational Videoconferencing Services (CCEB ACP 220(A):2008)

D.2.2. IETF

• Simple Mail Transfer Protocol (IETF RFC 2821:2001)

D.2.3. NATO

- OMG Systems Modeling Language (OMG SysML) (OMG formal-2015-06-03:2015)
- Unified Modeling Language, v2.4.1 (OMG formal/2011-08-05:2011)

D.2.5. W3C

• Simple Object Access Protocol (SOAP) (W3C NOTE-SOAP-20000508:2000)

APPENDIX E. PROCESSED RFCS

100. The following RFC have been processed::

| RFC# | Title | Origin |
|---------|--|---------------------|
| 12-003 | OTH-T Gold Baseline 2007 added | SACT |
| 12-004 | Update OMG SysML to ver 1.5 | C3B Arch CaT |
| 12-005 | Update UML to ver 2.5.1 | C3B Arch CaT |
| 12-006 | Change RP for UML and SysML to Arch CaT | C3B Arch CaT |
| 12-007 | Change RP for SOAML to Arch CaT | C3B Arch CaT |
| 12-008 | Add NAF4 | C3B Arch CaT |
| 12-009 | Add ISO/IEC/IEEE 42030.FDIS:2019 Software, systems and enterprise | C3B Arch CaT |
| 12-010 | Add UAF 1.0 | C3B Arch CaT |
| 12-011 | Replace all reference APP-11(D)(2) and APP-11(D)(3) with APP-11(D) (without version) | C3B CaP1 TDL CaT |
| 12-013 | Replace STANAG 5500 Ed 7 with STANAG 5500 Ed 8 | C3B CaP1 MTF CaT |
| 12-014a | Change NATO ACP 192 NS-1(B) to NATO ACP 192 NS-1(C) | C3B NACP CaT |
| 12-014b | Change NATO ACP 192 NS-2(B) to NATO ACP 192 NS-2(C) | C3B NACP CaT |
| 12-014c | Remove CCEB ACP 220(A) | C3B NACP CaT |
| 12-014d | Change CCEB ACP 133 to CCEB ACP 133(D) | C3B NACP CaT |
| 12-014e | Change CCEB ACP 133 Suppl. 1edA to CCEB ACP 133 Supplement 1 (A) | C3B NACP CaT |

NATO LETTER OF PROMULGATION

The enclosed Alied Data Publication ADatP-34, Edition M, Version 1 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition M, Version 1 is effective on receipt.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Zoltán GULYÁS Brigadier General, HUNAF Director, NATO Standardization Office

CHAPTER 1. INTRODUCTION

001. Volume 2 of the NISP focuses on agreed interoperability standards and profiles.

002. The NISP references Standards from different standardization bodies¹. In the case of a ratified STANAG, NATO Standardization procedures apply. The NISP only references these STANAG's without displaying the country-specific reservations. The country-specific reservations can be found in the NATO Standardization Office&s NATO Standardization Document Database (NSDD).

003. The Combined Communications Electronics Board (CCEB) nations will use NISP Volume 2 Chapter 3 and Section 3.3 tables to publish the interoperability standards for the CCEB under the provisions of the NATO-CCEB List of Understandings (LoU)².

1.1. SCOPE

004. The scope of this volume includes:

- Identifying the standards and technologies that are relevant to a service oriented environment,
- Describing the standards and technologies to support federation.

¹In case of conflict between any recommended non-NATO standard and relevant NATO standard, the definition of the latter prevails.

CHAPTER 2. REFERENCE MODELS: TRANSITION FROM PLATFORM CENTRIC TO SERVICE ORIENTED MODELS

005. Information technology has undergone a fundamental shift from platform-oriented computing to service-oriented computing. Platform-oriented computing emerged with the widespread proliferation of personal computers and the global business environment. These factors and related technologies have created the conditions for the emergence of network-oriented computing. This shift from platform to network is what enables the more flexible and more dynamic network-oriented operation. The shift from viewing NATO and partner Nations as independent to viewing them as part of a continuously adapting network ecosystem fosters a rich information sharing environment.

006. This shift is most obvious in the explosive growth of the Internet, intranets, and extranets. Internet users no doubt will recognize transmission control protocol/internet protocol (TCP/IP), hypertext transfer protocol (HTTP), hypertext markup language (HTML), Web browsers, search engines, and Java¹ Computing. These technologies, combined with high-volume, high-speed data access (enabled by the low-cost laser) and technologies for high-speed data networking (switches and routers) have led to the emergence of network-oriented computing. Information "content" now can be created, distributed, and easily exploited across the extremely heterogeneous global computing environment. The "power" or "payoff" of network-oriented computing comes from information-intensive interactions between very large numbers of heterogeneous computational nodes in the network, where the network becomes the dynamic information grid established by interconnecting participants in a collaborative, coalition environment. At the structural level, network-enabled warfare requires an operational architecture to enable common processes to be shared.

007. One of the major drivers for supporting net-enabled operations is Service-Oriented Architectures (SOA). SOA is an architectural style that leverages heterogeneity, focuses on interfaces between services and as such this approach is inherently platform-neutral. It is focused on the composition of Services into flexible processes and is more concerned with the Service interface and above (including composition metadata, security policy, and dynamic binding information), more so than what sits beneath the abstraction of the Service interface. SOA requires a different kind of platform, because runtime execution has different meanings within SOA. SOA enables users and process architects to compose Services into processes, and then manage and evolve those processes, in a declarative fashion. Runtime execution of such processes is therefore a metadata-centric operation of a different kind of platform -- a Service-oriented composite application platform.

008. Service-enabled operations are characterized by new concepts of speed of command and self-synchronization.

¹Registered Trademark of ORACLE and/or its affiliates. Other names may be the trademarks of their respective owners.

009. The most important SOA within an enterprise is the one that links all its systems. Existing platforms can be wrapped or extended in order to participate in a wider SOA environment. NATO use of the NISP will provide a template for new systems development, as well as assist in defining the path for existing systems to migrate towards net-enabled operations.

revision: v12.2-84-g22e8f86

CHAPTER 3. STANDARDS

3.1. INTRODUCTION

- 010. The purpose of this chapter is to specify the agreed NISP standards. The document organizes these standards, following baseline 2.0 NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-D(2016)0017 "C3 Taxonomy Baseline 2.0" dated 14 March 2016. A graphical representation of this taxonomy is included in volume 1.
- 011. For some standards it was not clear yet which service identified in the C3 Taxonomy should be used. Therefore, as an interim solution, the taxonomy was extended with e.g. user-defined "Cloud Services". In a separate section, all standards are listed for which could not yet be defined how they should be linked to the C3 Taxonomy.
- 012. The standards are presented in tabular form. Each table represent a subtree from the C3 taxonomy and each table line (marked in bold and spanning all columns in the table) represents a taxonomy node from the subtree. Under each taxonomy node title, all standards which are mapped to the node are listed with the following attributes: title of the standard; where possible, a link to the standard; publication number of the standard; a list of all the capability profiles where the standard is used; and finally the "responsible party" which is the domain expert that advises NATO about the standard. In general, a taxonomy node is only listed if at least one standard is assigned to this taxonomy node.
- 013. When STANAG X Ed Y is in ratification process, this is indicated by STANAG (RD) X Ed Y, and when it is a study draft, this is indicated by STANAG (Study) X Ed Y.

3.1.1. Releasability Statement

014. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

¹TMF000 - TMF000 is included in FMN Spiral 3. An official publication number is not yet available.

3.3. TECHNICAL SERVICES

015. The "Technical Services" include those services required to enable "User Applications". They are part of the "Back-End Capabilities" while "User Applications" are part of "User-Facing Capabilities".

016. According to the C3 Taxonomy, they consist of "Community Of Interest (COI) Services", "Core Services" and "Communications Services". The complete collection of Technical Services is sometimes referred to as the "Technical Services Framework" (TSF) or "NNEC Services Framework" (NSF).

017. In addition to the "Technical Services" identified in the C3 Taxonomy, a taxonomy layer "Cloud Computing" has been added. This enables a more useful categorization of cloud-based standards (currently only included as candidate standards).

3.3.7. Extended C3 Taxonomy

018. The following table list taxonomy nodes, which will be part of a future version of the C3 taxonomy. They are part of this document, because stakesholders have decided to using an unofficial classification scheme for a specific purpose.

3.4. UN-ASSIGNED STANDARDS

019. The following standards have been declared mandatory standards for NATO common funded system. However, no information of how to map the standards to the C3 Taxonomy have been provided.

| Title | Pubnum | Profiles | Responsible Party |
|---|--------------------------|--------------------------------------|----------------------|
| Undefined Taxonomy Node | | | |
| Common Directory Services and Procedures | CCEB ACP 133(C):2008 | SIP-ENTR-DIR | C3B NACP CaT |

revision: v12.2-84-g22e8f86

CHAPTER 4. AGREED PROFILES

4.1. INTRODUCTION

020. The NATO Interoperability Standards and Profiles include the set of Agreed Profiles listed below.

Table 4.1. Agreed Profiles

| Service Area | Title | | |
|--|---|--|--|
| Abstract | | | |
| URI | ID | | |
| Federated Mission Networking | FMN Spiral 1.1 Profile | | |
| Defines the Standards Profile for Federated Mission Networking (FMN) Spiral 1. FMN Standards Profiles provide a suite of interoperability standards and other standardized profiles for interoperability of selected community of interest services, core services and communications services in a federation of mission networks. It places the required interoperability requirements, standards and specifications in context for FMN Affiliates. | | | |
| NISP-V2-FMN-spiral-1.pdf | FMN1 | | |
| Federated Mission Networking | FMN Spiral 2 Profile | | |
| other standardized profiles for interoperability core services and communications services in a the required interoperability requirements, star Affiliates. FMN Spiral 2 Profile | a federation of mission networks. It places | | |
| | | | |
| Federated Mission Networking FMN Spiral 3 Profile | | | |
| This document defines the Standards Profile for Federated Mission Networking (FMN) Spiral 3. The FMN Standards Profiles provides a suite of interoperability standards and other standardized profiles for interoperability of selected community of interest services, core services and communications services in a federation of mission networks. It places the required interoperability requirements, standards and specifications in context for FMN Affiliates. | | | |

| Service Area | Title | |
|--|--|--|
| Abstract | | |
| URI | ID | |
| Outlines the file formats and package structure long-term preservation of NATO digital information of the control of the contr | es approved by the Archives Committee for the mation of permanent value. | |
| NISP-V2-archive-profile.pdf | ARCHIVE-ARCHIVE | |
| SECURITY SERVICES | SERVICE INTERFACE PROFILE SECURITY SERVICES | |
| This Service Interface Profile (SIP) describes t Enterprise Services (CES) Security Services. | the key elements that make up the NNEC Core | |
| AI_TECH_2016.06.02.01_SIP.pdf | SIP-SEC | |
| REST SECURITY SERVICES | SERVICE INTERFACE PROFILE FOR REST SECURITY SERVICES | |
| This specification provides the profile for securing representational state transfer (REST) web services (known as RESTful web services) that are deployed within the NNEC web service infrastructure. It specifies security requirements that need to be accounted for depending on the environment in which the services are being deployed, and the level of assurance required for protecting those services. This profile covers the required security protection profile for a Client to access protected resources on a Resource Server using REST. | | |
| AI_TECH_2016.06.02.02_SIP.pdf | SIP-REST | |
| SECURITY TOKEN SERVICES SERVICE INTERFACE PROFILE FOR SECURITY TOKEN SERVICES | | |
| The purpose of this Service Interface Profile (SIP) is to specify how the security token service component of the Core Enterprise Services (CES) Security Services may be called. | | |
| AI_TECH_2016.06.02.03_SIP.pdf | SIP-TOKEN | |
| POLICY ENFORCEMENT POINTS | SERVICE INTERFACE PROFILE FOR POLICY ENFORCEMENT POINTS | |
| The purpose of this Service Interface Profile (SIP), which should be read along with the Agency Directive 06.05.04.02.H 2, "Service Interface Profile for Security Services" [NCIA AD 06.05.04.02.H], is to specify how services may be called that are protected by the Core Enterprise Services (CES) Security Services. | | |
| AI_TECH_2016.06.02.04_SIP.pdf | SIP-POLICY-ENFORCE | |
| ENTERPRISE DIRECTORY SERVICES | SERVICE INTERFACE PROFILE FOR ENTERPRISE DIRECTORY SERVICES | |
| The purpose of this Service Interface Profile (SIP) is to specify the interface of the directory service itself. | | |

revision: v12.2-84-g22e8f86

| Abstract | | |
| URI | ID | |
| AI_TECH_2016.06.02.05_SIP.pdf | SIP-ENTR-DIR | |
| MESSAGING | SERVICE INTERFACE PROFILE FOR MESSAGING | |
| This specification provides the interface control web services that are deployed within the NNE | 1 3 1 | |
| AI_TECH_2016.06.02.06_SIP.pdf | SIP-MESG | |
| REST MESSAGING | SERVICE INTERFACE PROFILE FOR REST MESSAGING | |
| This specification provides the profile for secure web services (known as RESTful web services service infrastructure. This covers only the call Service Provider using REST, and the respons the message must be structured and the element | s) that are deployed within the NNEC web I from a Web Service Consumer to a Web e from the service provider. It includes how | |
| AI_TECH_2016.06.02.07_SIP.pdf | SIP-REST-MSG | |
| PUBLISH-SUBSCRIBE SERVICES | SERVICE INTERFACE PROFILE FOR PUBLISH-SUBSCRIBE SERVICES | |
| This document gives directives along with clarifications and amendments to the [OASIS WS-BaseNotification, 2006] and [OASIS WS-BrokeredNotification, 2006] specification on how to implement a notification broker/subscription manager to promote interoperability between the publish/subscribe engines and generic message subscribers. Some extensions to the protocol have been introduced in order to meet NATO requirements. | | |
| AI_TECH_2016.06.02.08_SIP.pdf | SIP-PUBSUB | |
| PUBLISH-SUBSCRIBE NOTIFICATION BROKER WITH SUBSCRIPTION MANAGER | SERVICE INTERFACE PROFILE FOR PUBLISH-SUBSCRIBE NOTIFICATION BROKER WITH SUBSCRIPTION MANAGER | |
| This document is part of a Service Interface Profile (SIP) for Publish/Subscribe Core Enterprise Services (CES) and should be read together with the main document [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification compliant notification broker. It is REQUIRED that each notification broker implementation also includes the subscription manager functionality. | | |
| AI_TECH_2016.06.02.09_SIP.pdf | SIP-PUBSUB-NOTIF-BROOKER | |
| PUBLISH-SUBSCRIBE NOTIFICATION CONSUMER | SERVICE INTERFACE PROFILE FOR PUBLISH-SUBSCRIBE NOTIFICATION CONSUMER | |

| Service Area | Title | |
|--|---|--|
| Abstract | | |
| URI | ID | |
| This document is part of a Service Interface Profile (SIP) for publish/subscribe Core Enterprise Services (CES) and should be read together with the main document "Service Interface Profile for Publish/Subscribe Services" [NCIA AD 06.05.04.02.E]. It gives guidance on implementation of a WS-Notification-compliant notification consumer. | | |
| AI_TECH_2016.06.02.10_SIP.pdf | SIP-PUBSUB-NOTIF-CONSUMER | |
| A NOTIFICATION CACHE SERVICE | SERVICE INTERFACE PROFILE FOR A NOTIFICATION CACHE SERVICE | |
| Enterprise Services (CES) Notification Cache which a Notification Cache service offers toge serves as a template and guideline for implementations. | entations. | |
| AI_TECH_2016.06.02.11_SIP.pdf | SIP-NOTIF-CACHE | |
| BASIC COLLABORATION SERVICES | SERVICE INTERFACE PROFILE FOR BASIC COLLABORATION SERVICES | |
| This Collaboration Service Interface Profile (S based on the extensible messaging and present | , | |
| AI_TECH_2016.06.02.12_SIP.pdf | SIP-BCS | |
| CORE AND ADVANCED INSTANT MESSAGING COLLABORATION SERVICES SERVICES SERVICE INTERFACE PROFILE CORE AND ADVANCED INSTA MESSAGING COLLABORATION SERVICES | | |
| This document specifies the Service Interface Profile (SIP) for a number of instant messaging services that can be implemented and used by any XMPP entity (XMPP Client or XMPP Server) on the XMPP network. | | |
| AI_TECH_2016.06.02.13_SIP.pdf | SIP-MESG-COL-SERV | |
| GEOSPATIAL SERVICES – MAP RENDERING SERVICE | SERVICE INTERFACE PROFILE FOR GEOSPATIAL SERVICES – MAP RENDERING SERVICE | |
| This document gives guidance on the impleme special kind of a Geospatial Service. | entation of a Map Rendering Service, being a | |
| AI_TECH_2016.06.02.14_SIP.pdf | SIP-GEO-MRS | |
| Recognized Air Picture Data Services | Service Interface Profile for Recognized Air Picture Data | |

| Service Area | Title | | |
|---|--|--|--|
| Abstract | Abstract | | |
| URI | ID | | |
| This Service Interface Profile provides detailed information, guidance, instructions, standards and criteria to define the minimum set of data elements that are required to be available for operational or technical reasons so that correctly formatted technical message can be generated to establish a Recognized Air Picture in a federated environment. FMN Spiral 3 Profile including SIP for RAPD SIP-RECOGNIZED-AIR-PICTURE-DATA | | | |
| Service Management Services | Service Interface Profile for Service Management and Control | | |
| This Service Interface Profile provides guidance and technical details to the procedures, supporting services, infrastructure and data attributes required to implement Service Management and Control (SMC) services in Mission Networks. As such, this document contributes to the establishment of capabilities in support of Federated Mission Networking (FMN) as an affordable, effective and efficient means to enable sharing of information in a coalition environment. | | | |
| FMN Spiral 3 Profile including SIP for SMC | SIP-FOR-SMC | | |
| Transport Layer Security | Service Interface Profile for Transport Layer Security | | |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used as a for the usage of Transport Layer Security (TLS) protocol to provide authentication, confidentiality and integrity services for protecting the communication between a consumer and a provider. This publication is a living document and will be periodically reviewed and updated to reflect technology developments, emerging best practices, evolving standards and new or deprecated cryptographic schemes and algorithms. | | | |
| FMN Spiral 3 Profile including SIP for TLS | SIP-FOR-TLS | | |
| Web Applications | Service Interface Profile for Web Applications | | |
| This Service Interface Profile (SIP) provides detailed information, guidance, instructions, standards and criteria to be used for development, delivery and consumption of Web applications and dynamic Web sites. This publication is a living document and will be periodically reviewed and updated to reflect technology developments and emerging best practices. FMN Spiral 3 Profile including SIP for Web SIP-FOR-WEB-APPS | | | |
| Apps | | | |
| Cryptographic Services | Cryptographic Artefact Binding Profiles | | |

| Service Area | Title | |
|--|---|--|
| Abstract | | |
| URI | ID | |
| Profile the use of cryptographic protocols, which can be used to implement support for different cryptographic techniques and mechanisms, for generating cryptographic artefacts t be stored in a cryptographic binding. TN-1491_Edition2-Binding_Profiles_v1.0- BINDING-CRYPTO-V2 | | |
| Signed.pdf - Annex A | | |
| Informal Messaging Services | Simple Mail Transfer Protocol (SMTP) Binding Profile | |
| This profile specifies the mechanism for binding informal) including MIME entities. | ng metadata to Internet Email (both formal and | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex B | BINDING-SMTP-V2 | |
| XMPP Services | Extensible Message and Presence Protocol (XMPP) Binding Profile | |
| whereby a mechanism for carrying Enhanced Security Services (ESS) Security labels is standardized. This profile extends the XEP-0258 specification to support carrying an Embedded or Detached BDO for Message stanzas. This profile supports the XMPP use cases for one-to-one instant messaging and multi-user chat. TN-1491_Edition2-Binding_Profiles_v1.0- BINDING-XMPP-V2 | | |
| Signed.pdf - Annex C | | |
| Metadata Services | Office Open XML (OOXML) Formats Binding Profile | |
| This profile for the OOXML describes how metadata can be maintained. | | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex D | BINDING-OOXML-V2 | |
| SOAP Services | Simple Object Access Protocol (SOAP) Profile | |
| This profilesupports for both SOAP 1.1 and SOAP 1.2. To support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the SOAP protocol layer. Metadata may be bound to the whole data object (SOAP message) or may be bound to subsets of the SOAP message (data object(s) in the SOAP body). In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). | | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex E | BINDING-SOAP | |

revision: v12.2-84-g22e8f86

| Service Area | Title | |
|--|--|--|
| Abstract | 1 | |
| URI | ID | |
| REST Services | Representational State Transfer (REST) Profile | |
| In an environment where data objects must have bound metadata, the resource identified in the URI will already contain a BDO (detached, encapsulating or embedded). As such, there is no requirement for metadata binding that is specific for REST. However, to support information sharing between partners it may be necessary to locate a Binding Data Object (BDO) in the HTTP protocol layer. | | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex F | BINDING-REST-V2 | |
| Generic Packaging Services | Generic Open Packaging Convention (OPC) Binding Profile | |
| This profile defines a generic packaging mechanism, based upon the Open Packaging Container (OPC) defined in ISO/IEC 29500-2:2008, to associate any arbitrary file that do not use the Office Open XML (OOXML) format or have no specific profile for supporting the Binding Information with their own file format. | | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex G | BINDING-GENERIC-V2 | |
| Sidecar Services | Sidecar Files Binding Profile | |
| Sidecar files allow the association of metadata with a data object for which there is no profile. | | |
| Sidecar_Files_Binding_Profilev1.0.pdf - Annex H | BINDING-SIDECAR-V2 | |
| XMP Services | Extensible Metadata Platform (XMP) Binding Profile | |
| This Binding Profile for XMP describes how metadata should be incorporated within an XMP packet as a structured value. | | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex I | BINDING-EXTENSIBLE-V2 | |
| WSMP Services | Web Service Messaging Profile (WSMP) Profile | |
| The Web Service Messaging Profile (WSMP) defines a set of service profiles to exchange arbitrary XML-based messages. WSMP is extensible and may be used by any Community of Interest (COI). This profile supports the requirement to explicitly bind metadata to data (or subsets thereof) whereby the data is XML-based and exchanged between service consumers and service providers using the WSMP message wrapper mechanism. | | |

| Service Area | Title |
|---|--------------------------|
| Abstract | |
| URI | ID |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex J | BINDING-WSMP |
| XML Artifacts Profile | Common XML artefacts 2.0 |
| This profile supports the requirement to bind metadata to data (or subsets thereof) whereby the data is XML-encoded in one of the following schemas: XML Schema, ISO Schematron, XML Stylesheet, Generic Codelist, Context/Value Assosiation or Security Policy Information File. | |
| TN-1491_Edition2-Binding_Profiles_v1.0-Signed.pdf - Annex K | BINDING-COMMON-XML |

NATO LETTER OF PROMULGATION

The enclosed Alied Data Publication ADatP-34, Edition M, Version 1 NATO Interoperability Standards and Profiles, which has been approved by the nations in the C3B, is promulgated herewith. The agreement of nations to use this publication is recorded in STANAG 5524.

ADatP-34, Edition M, Version 1 is effective on receipt.

No part of this publication may be reproduced, stored in a retrieval system, used commercially, adapted, or transmitted in any form or by any means, electronic, mechanical, photo-copying, recording or otherwise, without the prior permission of the publisher. With the exception of commercial sales, this does not apply to member or partner nations, or NATO commands and bodies.

This publication shall be handled in accordance with C-M(2002)60.

Zoltán GULYÁS Brigadier General, HUNAF Director, NATO Standardization Office

CHAPTER 1. STANDARDS

1.1. INTRODUCTION

001. The purpose of this chapter is to specify the candidate NISP standards. The document organizes these standards, following baseline 2.0 NATO's C3 Taxonomy, as endorsed by the NATO C3 Board per AC/322-N(2016)0021-AS1 on 11 February 2016. A graphical representation of this taxonomy is included in volume 1.

002. For some standards it was not clear yet which service identified in the C3 Taxonomy should be used. Therefore, as an interim solution, the taxonomy was extended with e.g. user-defined "Cloud Services". In a separate section, all standards are listed for which could not yet be defined how they should be linked to the C3 Taxonomy.

003. The standards are presented in tabular form. Each table represent a subtree from the C3 taxonomy and each table line (marked in bold and spanning all columns in the table) represents a taxonomy node from the subtree. Under each taxonomy node title, all standards which are mapped to the node are listed with the following attributes: title of the standard; where possible, a link to the standard; publication number of the standard; a list of all the capability profiles where the standard is used; and finally the "responsible party" which is the domain expert that advises NATO about the standard. In general, a taxonomy node is only listed if at least one standard is assigned to this taxonomy node.

004. When STANAG X Ed Y is in ratification process, this is indicated by STANAG (RD) X Ed Y, and when it is a study draft, this is indicated by STANAG (Study) X Ed Y.

1.1.1. Releasability Statement

005. In principle, NISP only contains or references standards or related documents, which are generally available for NATO/NATO member nations/CCEB.

1.2. USER APPLICATIONS

| Title | Pubnum | Profiles | Responsible Party |
|-------|--------|----------|----------------------|
| | | | |

1.3. TECHNICAL SERVICES

006. The "Technical Services" include those services required to enable "User Applications". They are part of the "Back-End Capabilities" while "User Applications" are part of "User-Facing Capabilities".

007. According to the C3 Taxonomy, they consist of "Community Of Interest (COI) Services", "Core Services" and "Communications Services". The complete collection of Technical

Services is sometimes referred to as the "Technical Services Framework" (TSF) or "NNEC Services Framework" (NSF).

008. In addition to the "Technical Services" identified in the C3 Taxonomy, a taxonomy layer "Cloud Computing" has been added. This enables a more useful categorization of cloud-based standards (currently only included as candidate standards).

1.3.1. Community Of Interest (COI) Services

1.3.4. Extended C3 Taxonomy

009. The following table list taxonomy nodes, which will be part of a future version of the C3 taxonomy. They are part of this document, because stakesholders have decided to using an unofficial classification scheme for a specific purpose.

1.4. UNASSIGNED STANDARDS

010. The following standards have been declared candidate standards for NATO common funded systems. However, no information of how to map the standards to the C3 Taxonomy have been provided.

| Title | Pubnum | Profiles | Responsible Party |

APPENDIX A. CANDIDATE PROFILES

A.1. INTRODUCTION

011. The NATO Interoperability Standards and Profiles include the set of Candidate Profiles listed below.

Table A.1. Candidate Profiles

| Service Area | Title | |
|---|-------------------------------|--|
| Abstract | | |
| URI | | |
| Federated Mission Networking | Proposed FMN Spiral 4 Profile | |
| This document defines the proposed Standards Profile for Federated Mission Networking (FMN) Spiral 4. The FMN Standards Profiles provides a suite of interoperability standards and other standardized profiles for interoperability of selected community of interest services, core services and communications services in a federation of mission networks. It places the required interoperability requirements, standards and specifications in context for FMN Affiliates. | | |
